Case #3 - Beaucourt-Sur-Ancre May 10, 1957.

Investigators : Marc Thirouin The general different director of C.I.E. Ouranos and Y de Saint-Aubin the secretary general of C.I.E. Ouranos and Jules reporter and investigator of C.I.E. Ouranos for the department that is located in Somme.

Eye Witnesses: Mr. [REDACTED], a highway maintenance laborer of S.N.C.F. and Mr. [REDACTED] a S.N.C.F road-mender and Mrs. [REDACTED], Mr. [REDACTED] an equipment man for S.N.C.F and the municipal counsellor of [REDACTED].

Other Witnesses: [REDACTED] retired and Mrs. [REDACTED] and Mr. [REDACTED] a farmer all of Beaucourt-Sur-Ancre. Some others.

The narration and testimony of the witnesses.

Mr. [REDACTED] On May 10, 1957 my wife and I were in the company of some neighbours (Mr. & Mrs. [REDACTED]) who had come to pay us a visit. We were in the kitchen, my wife left and went to the bedroom where our son lay ill. At approximately 10:45 P.M. we heard someone tap on the kitchen windows and so we opened the window and there we saw Mr. [REDACTED], a Hungarian refugee who has been here since 1942, all panting and puffing, he kept repeating "They attacked me", "They attacked me!" At the time of all the confusion we asked him to please come in and we dimmed the lights. In very whispered words he told us what had happened and why he was so frightened and we listened attentively then we looked out the window.....

Mr. [REDACTED] - On May 10, 1957 at approximately 10:45 P.M. as I was riding home

on the route that comes from Beaumont on the way to Beaucourt-Sur-Ancre coming from church. Upon arriving at the level of the electric transformer at the turn in the highway that at this time of the night and at this side is generally deserted, therefore I was very surprised to observe a very powerful flare located on the highway. After observing the flare I observed four silhouettes of human aspect that seemed to be blocking my way. Very strongly amazed at this arrangement<sup>that</sup>/immediately struck me as being an ambush so that I jumped from my bike and ran to take cover behind the transmitter device and through a foot path and after a rather long detour I stumbled upon the house of Mr.&Mrs. [REDACTED]. I tapped on the window of their kitchen and they let me in and then I explained to them what had happened and what I had done.

Then all of us observed the latter from the window. Mr.& Mrs. [REDACTED] then Mr. [REDACTED] who had also passed along this route.

Mr. [REDACTED] - Through the window of our kitchen we observed all five of these humans on the open route to Miramont at less than 50 meters was a brilliant light whose color would blink on white then turn to dull red. Then so that we could see better we went to the door. The light remained more on the red than on the white. When it was white it appeared to be the fire of a very powerful floodlight projector and it was blinding.

This light cast a reflection to the back of it and very near this we observed three figures that appeared to be that of three men who could not measure more than 1.50 meters standing on the highway in an immobile manner. their arms hanging along side their bodies and half-hidden by the slope of the hill. They seemed to be dressed in a greyish-beige outfit and their heads seemed to be very somber coloured although we did not get a good close look at them.

An automobile passed along the open highway and the headlights of the auto let us have, for a brief instant, another look at the three, still immobile, figures.

After the automobile passed the white light reappeared but less blinding and higher

above the level of the highway. We saw it shine in the sky at approximately a  $45^{\circ}$  angle towards the North-East approximately towards M. [REDACTED] and without making a single sound. This all took place at approximately 11:15. The light started to fade. But approximately 15 minutes later it once again appeared high in the sky above the church (to the North-East). It seemed that as it flew away its brightness diminished. Soon we lost sight of it.

Towards the end of the observation, I went to the station behind the house to warn my colleague who was still on duty (Mr. [REDACTED]). He promptly joined us and observed the light taking flight.

We called the police in Albert and approximately a half-hour later they arrived. We accompanied them on the highway right to the place where we had seen the light and the beings.

There, we were all surprised upon encountering the presence, on the highway, of approximately 12 different sets of forms. These were all of different dimensions and widths and black as the casting of costly tar. This was divided along the periphery of a circular area of approximately 3 to 4 meters in diameter. The principal series set measured approximately 40 centimeters in diameter and had a width of 1 centimeter. This soft substance was slightly stinking to the ground and we were able to remove it by rolling it on itself as if it were crepe paper. It had no trace of circulation except that of the tire mark of an auto, that was most probably the auto that we had seen pass during the time we were observing the other phenomenon and I now refer to that auto that appeared approximately 10 minutes after the light disappeared.

The next few days, these traces were flattened, they also stretched and adhered to the ground and it was then impossible to remove any more of this substance.

This substance was not tar because it had a slight stool odour.

The five other witnesses, Mrs. [REDACTED], Mr. & Mrs. [REDACTED], Mr. [REDACTED] and Mr. [REDACTED], were all questioned individually and they all confirmed this report.

Examination of the sets of substance on the highway.

At the site that had been indicated by the witnesses we examined the previously described pieces of matter. They appeared to be similar to stretched pieces of tar on the highway but they did not contain any gravel in contrast to that tar on the highway and they did not stem from the highway and were definitely not part of a piece that had been worked on as the highway in this section was in good condition.

We tried to use a knife and remove some of this but it adhered to the highway and to the knife and to our fingers and was very difficult to remove. It did not smell like tar and rather gave an odor that was even worse than tar. However the latter did not seem to smell like cow dung as was previously stated.

We lifted some of the particles of the highway that also seemed to smell like the characteristic tar odour.

At some hundred meters of the latter, in front of a monument for dead, we removed some of the highway that had been patched and it seemed to be similar to the mysterious substance that we had encountered although it did not smell like the latter.

We subjected these three pieces to the flame of a bunsen burner and the repair piece of the highway gave off the well known odor of hot tar and the two other pieces although they were equally subjected to the flame gave off no recognizable odor with the exception of one that slightly resembled glue or wax.

These pieces are presently still being analysed but the experts to whom we submitted these pieces for examination have informed us that the mysterious substance is not tar but asphalt and the crackling that was produced during the sujection to the flame was probably due to some form of hydration, be it accidental or not.

Anyway any way that one looks at it if we are dealing with a known substance then the presence of the latter on the highway is therefore explained and also explains the cracked pieces that were encountered over an area of 3 to 4 meters in diameter. In this small province of 195 people, the passing of an asphalt truck would not go unnoticed and at 10:45 at night it would be an unlikelihood. Even a leak in a nozzle would not have left such traces. We examined the proximate bridges and highways for some other clues.

Cows and storm lamps.

We know, through the press the almost official version that has been accredited to the statements of the Mayor of Beaucourt, Mr. Chatelain. According to this version Mr. Chatelain left his house about 11:30 P.M. carrying a storm lamp to try and check on his cows (one of them having died) going to the pasture that is next to his farm and extends up to the intersection of the Miraumont highway route.

This could possibly be the lamp that the witnesses saw as having been the projector of red and white glaring lights, then the same light that they saw in the sky and the same that the 4 or 5 men that they saw eventually would have been Mr. Chatelain's cows.!

Or, we do not want to make remarks on the ridiculous of this situation and its interpretations. Only a glance at the photographs that we publish here and the diagram and the explanations and testimonies of each of the witnesses leads one to believe that the "cows and storm lamp" version is only one of state of mind.

Let us suppose that an experienced railroad man should confuse, comparable to the eye witnesses, that look into the sighting position and signal lamps should confuse the glare of a projector (floodlight) that blinks on red and white with that of a small storm lamp! Imagine! This could not happen and we will not believe it!

Let us add that of the reconstitution that proceeded the night of the famous storm lamp, in the pasture of Mr. [REDACTED], has amply demonstrated the fact that no confusion was possible inasmuch as that that is related to the intense light and the color that the trajectory and the speed of take-off that are retrospective of light has no comparison.

What exactly did Mr. [REDACTED] say?

We asked Mr. [REDACTED] for his version of the facts. But to be truthful the Mayor of Beaucourt does not seem to ever have had any real version of facts!

Without a doubt, and in front of the police, it is true that he pretended to say that his wife was the one that had left the house about 10:45 P.M. and 11:20 P.M.

But this is all at least one hour later than the event that is presently under investigation and then he said that his wife went to bed at 11:30 (this does seem possible because most farmers do go to bed early !). And then the next day in front of the Municipal council he pretended that he was the one that went out towards the above mentioned hours and he had his tractor with him (this seems a little less believable !)

When at last we asked him for his unbiased opinion he seemed a little embarrassed and he then revoked all that he had said in the police station and which is almost impossible to achieve. We know that is deals with a certain principal ,,... after all the Mayor's signature is at stake ! But the meeting did not seem to bother him and he did mention the fact that the witnesses that were involved were "honest people" and at no time did he try and create a feeling of distrust towards them and at no time did he become worried over their testimonies.

We therefore absolved Mr. [REDACTED] with the conviction that he was the first to deplore his statements and that they were perhaps a bit premature nor that he tried to make a fuss over the official version of facts that were jointly inscribed in the case by six of the most respected and most dignified inhabitants of the community, amongst which one of these was the Municipal Council.

Three days after these events Mr. [REDACTED] moreover stated that one of his administrators, Mr. Laine, had made some very different statements and had also remarked that "In any case there must be something to all of this ..."

The witnesses are very trustworthy people.

We pursued our investigation all over the country side and we realized that not one individual doubted the sincerity and the statements that had been made by the witnesses. On a whole all of the Beaucourtians are open and sincere, logical and calm and objective people. And they never pretended to know more than they really knew.

The Chief of the police station of Beaucourt-Hamel that had not been alerted or warned of the event on that famous evening yet when we posed the problem of the matter to him he voluntarily responded "They have surely seen something !".

All of the witnesses are employed by the railroad and they have made us aware of the following observation "Why tell stories ?" These inventions if they were only that would make us look bad in the eyes of our bosses. And also possibly jeopardize our individual job positions.

An orange light in the fields.

Now we will continue on in a more pleasant mood and by this we refer to the fact that the next night some of the young people of the village were shooting firecrackers in the fields of Mr. Chatelain and we found amongst the fields some of these half-burned firecrackers by the fields but this was not another cause of confusion as the cause was understandable.

More interesting is the observation that was conducted the night of May 12 and May 11 by Mr. & Mrs. [REDACTED] that live on the side of the Miraumont highway a little above the other witnesses. They had not spoken to the press and other officials.

Their statement is as follows:

"On May 10, we did not see anything as we were asleep [REDACTED] states. But the following evening I was awakened at approximately 3 in the morning (and at our ages sleep is one of our weakness's) at I passed by the window that passes through the room and is located in a South-West direction. I was attracted by a rather brilliant orange light that I perceived through the window. It was the same in diameter as the moon and the range of the glare reached the [REDACTED] home that is to the left of the Cafeteria at approximately 80 meters. I woke my wife up and told her to come and observe this strange light. She did and then after a few seconds the light disappeared and did not reignite so that we went back to bed.

Mrs. [REDACTED] confirmed the testimony of her husband. At this time of the night it is rather strange that one should believe that it could have been a stray firecracker and no one else would have observed it! At the [REDACTED] farm we found out that no one had seen anything strange and that all told they had all slept straight through the entire night. This surpassed the time that the Laines had been aroused by the strange light.

### Conclusions.

These are the first indications of an investigation that took place during a period of 10 hours on Saturday and Sunday the 18 and 19 of May. This was only 8 days after the occurrences. Some things must still be cleared up as we have already indicated and therefore all that really remains is that we comment on the magnetic investigations that were conducted on the metallic pieces that were located near the observation points. This is given later as a simple indication because a systematic study was begun after the set of phenomenons that were reported, referring to those that took place in Vins, Palalda and Beancourt. We will draw attention to the reader of the note and the magnetic measurements that follow.

The only place that is lacking now is that that would eventually deal with the vibrations that were confirmed both in Vins and Palalda. These can be supported as new and important elements for the solution of lift and support elements of the propulsion of Non-Identified Flying Objects. We continue our study of this subject.

~~XXXXXXXXXX~~

### Note.

If by some chance this article should fall into the hands of that person or persons whose automobile passed on Miraumont highway the 10<sup>th</sup> of May at approximately 11:00 P.M. and if they possibly did observe the "small men" on the path of the hill we would be very appreciative if they would place themselves in contact with us even if they should want to remain anonymous.

Gentlemen,

We take the liberty to send you a report concerning our investigation on a U.F.O landing at VINS-sur-CARME (Var), southern France.

Our investigation was controlled by Country Police of Brignoles (town at 8 kms west from Vins-sur-Carmy, and 73 kms N.E. from Marseille). Magnetic resonance after the U.F.O landing was also controlled by Country Police at our request.

Marc THIROUIN

Sincerely,  
JIMMY GUIEU  
Chef du Service d'Enquête

### THREE UNIDENTIFIED FLYING OBJECTS LAND IN FRANCE

By

~~XXXXXXXXXX~~ and ~~XXXXXXXXXX~~

At Vins-Sur-Caramy (Var), Palalda (Pyr-Or) and Beaucourt-Sur-Ancre (Somme) three unidentified flying objects were observed from the ground; eleven eye witnesses verified the truth of this statement. The physical phenomena that was carried by C. I. E. and the Bureau of O. V. N. I. (U. F. O.).

Last March, we announced the continuation of the proposal that was announced in 1957. This took place in a spectacular manner, and the apparition of "non-identified flying objects" (see the last issue of Ouranos), we did not think that the events would take place again and again. On April 14 and then again on the 22<sup>nd</sup> of April, and the last of these events took place on May 10. We were asked to investigate and confirm these events on the basis of the facts that were thought to be the most significant among those that we had amassed up to this time.

The press has been the mirror of these facts, of which the first event that occurred at Vins and then at Palalda and the last at Beaucourt supplied the material. We were in direct contact with the eye witnesses, police, aeronautical services, and the press and reporters. All of the latter were also informed of our interest in all available data.

The narrations that were published by the different newspapers, each was able to be confirmed, presented important differences on the essential points that naturally made the technical investigation indispensable. What was necessary to complete this investigation or how long it would take is immaterial. The first results of these investigations have been studied by the Committee of Investigation of C. I. E. Ouranos in the course of the last two meetings.

Examinations and analysis are now being pursued.

Therefore, without confirming anything, we publish and present, in their chronological order, the first reports that are related to the three events.

Case #1 - Vins-sur-Caramy (Var), April 14, 1957

Detective: Jimmy Guieu, Chief of the Investigational Bureau of C.I.E.  
Ouranos.

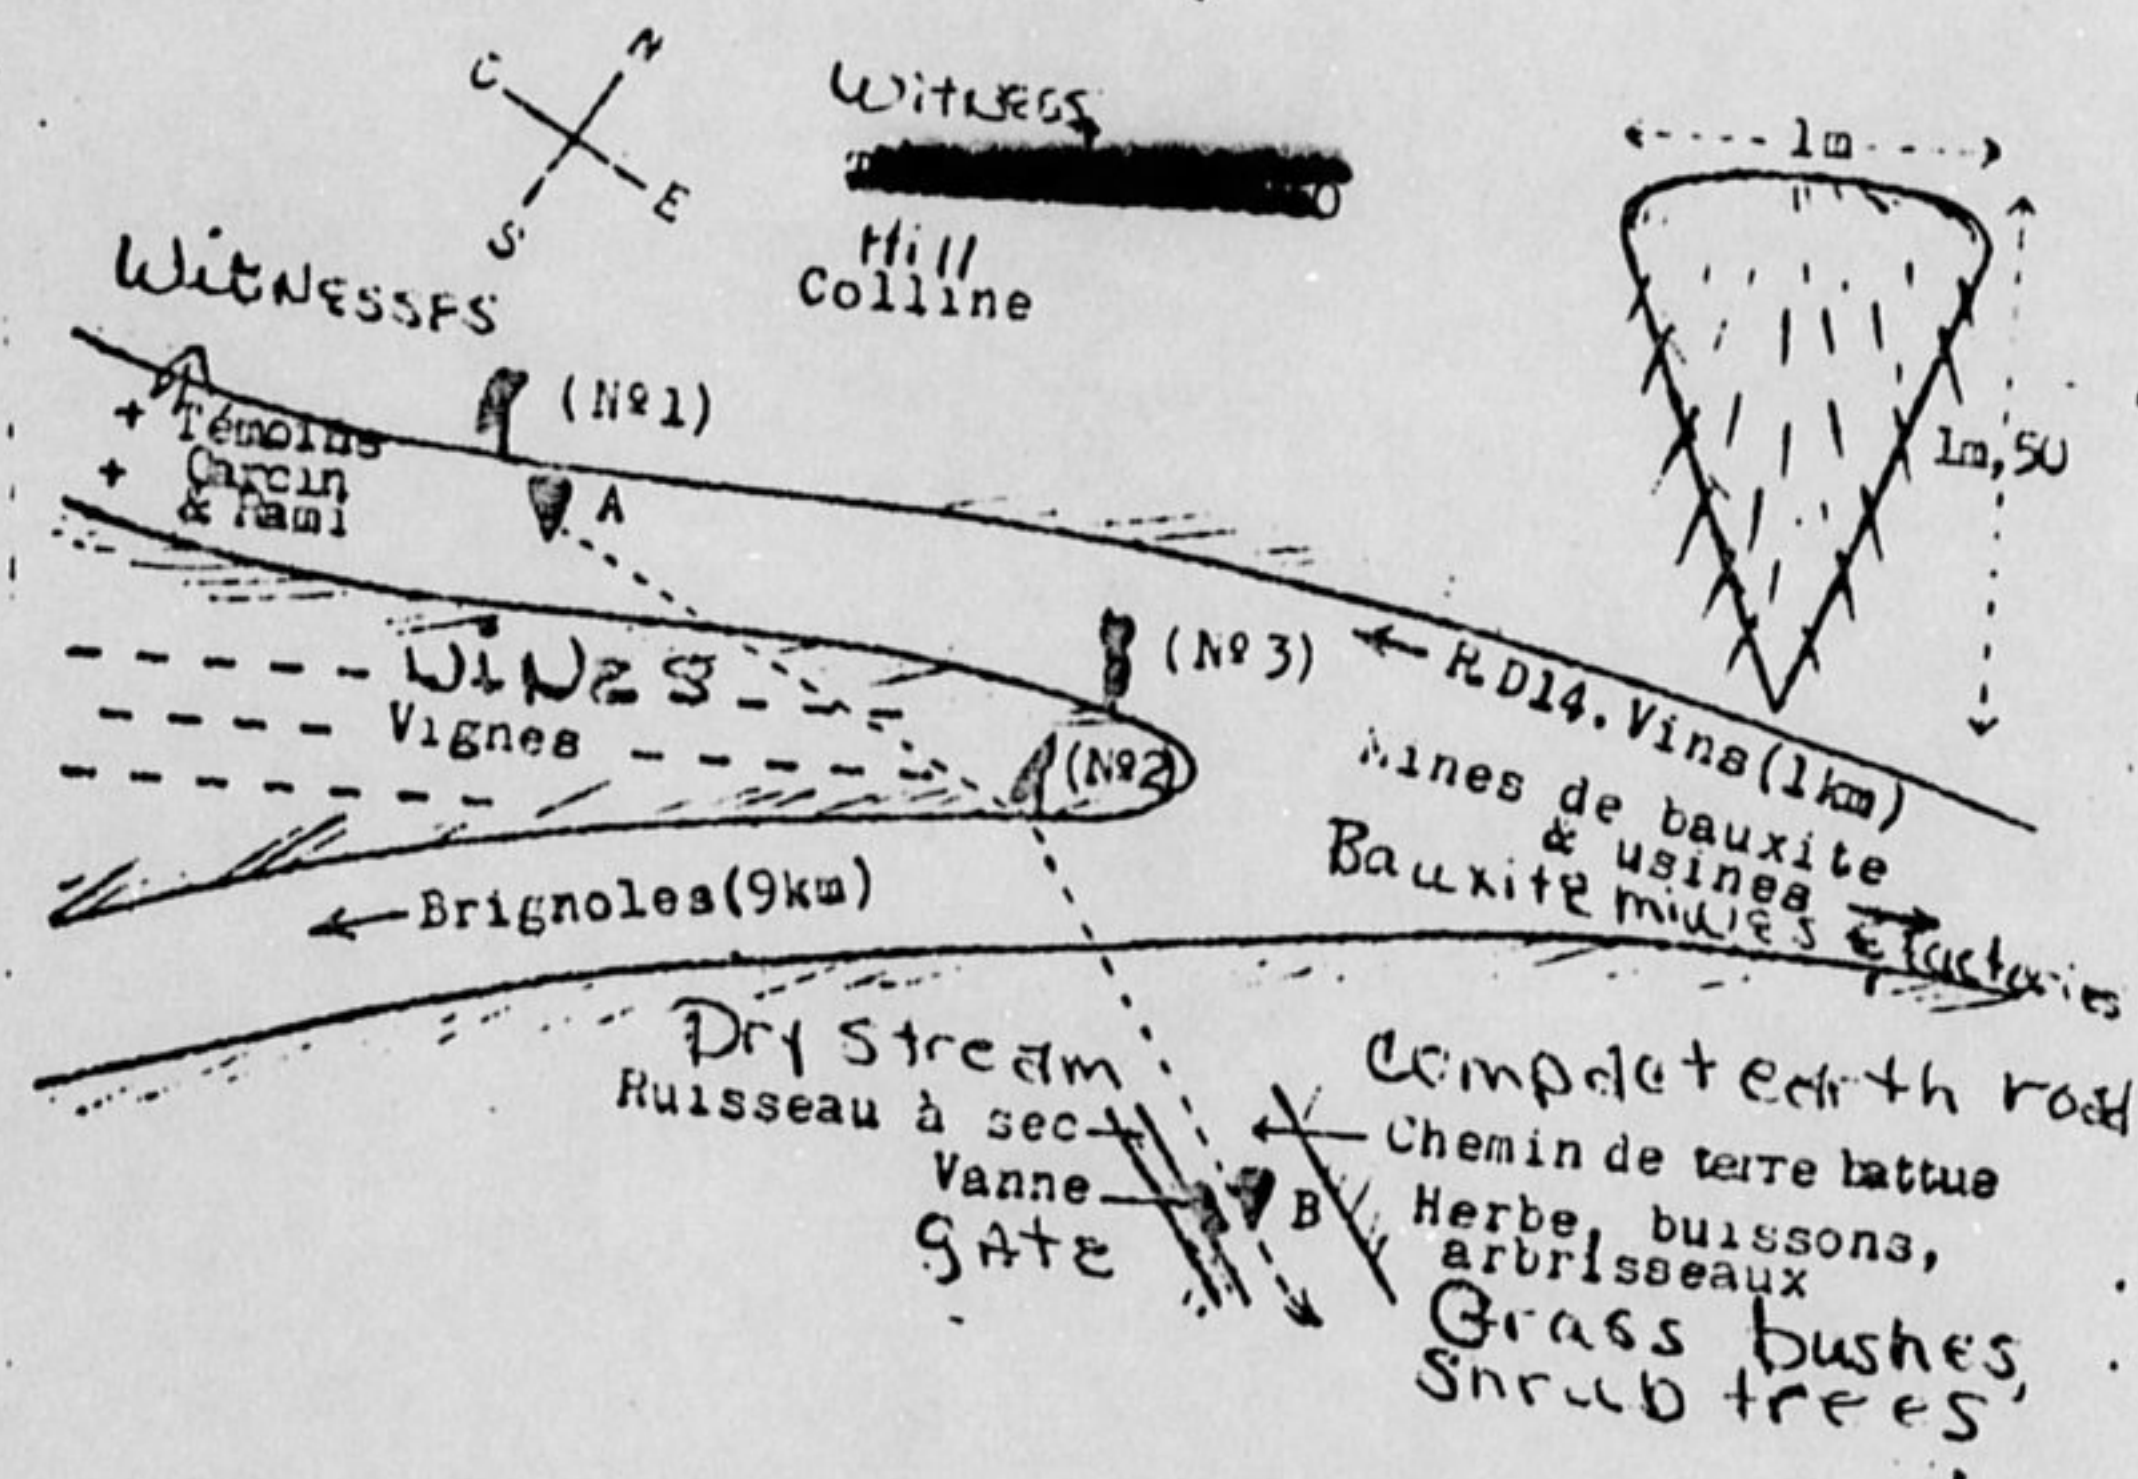

Assistant: M. Pierre Ayraud, Engineer of Studio of Radio Monte-Carlo.

Eye Witnesses: Miss [REDACTED], Miss [REDACTED], Mr. [REDACTED], all three live in Vins-sur-Caramy.

On Sunday, April 14, 1957, at 3:00 pm, Misses [REDACTED] and [REDACTED] were walking along route D.24 at approximately 1 kilometer to the east of Vins-sur-Caramy. Suddenly, at approximately 100 meters from where they were standing, a curious metallic apparatus landed. The apparatus was dull-metal colored and cone-shaped, and the nose of the apparatus was vertically pointed downwards. The apparatus was similar to a large spinning top with a convex peak. The maximum height of this apparatus is believed to be approximately 1.50 meters, and the maximum diameter was approximately 1 meter. There were metallic like tigela that were parallel to the walls of the cone-shaped apparatus that were rapidly vibrating.

At the time of the machine which was maneuvering to land, the witnesses heard a deafening noise. This noise was made by a signal panel that was rotating (#1 on the diagram that follows) that was situated at approximately 5 meters from the landing point and oscillated and vibrated in a brutal manner. Misses Garcin and Rami, frightened, let out a cry of surprise and terror and the same time of the noise.

Alerted by these shouts and screams, Mr. [REDACTED], who had been caring for an apiary in the hillside, came running as there was thought that there had been an automobile accident. It was then that he saw the apparatus take

A: First landing  
B: Second landing

Panels Nr. 1 and 2: Magnetic deviation

Panel Nr. 3: Course of deviation

Irrigation gate: Magnetic deviation

Inset: Schematic diagram of the engine with its outer tufts (activated by vibrations) according to description of witnesses.

off and once more engage in the strange vibrations. Then the apparatus made a skip over the route and making a turn towards the east, (approximately at 5 or 10 meters of altitude) it once more landed on a slight little patch at approximately 200 meters from its first landing point.

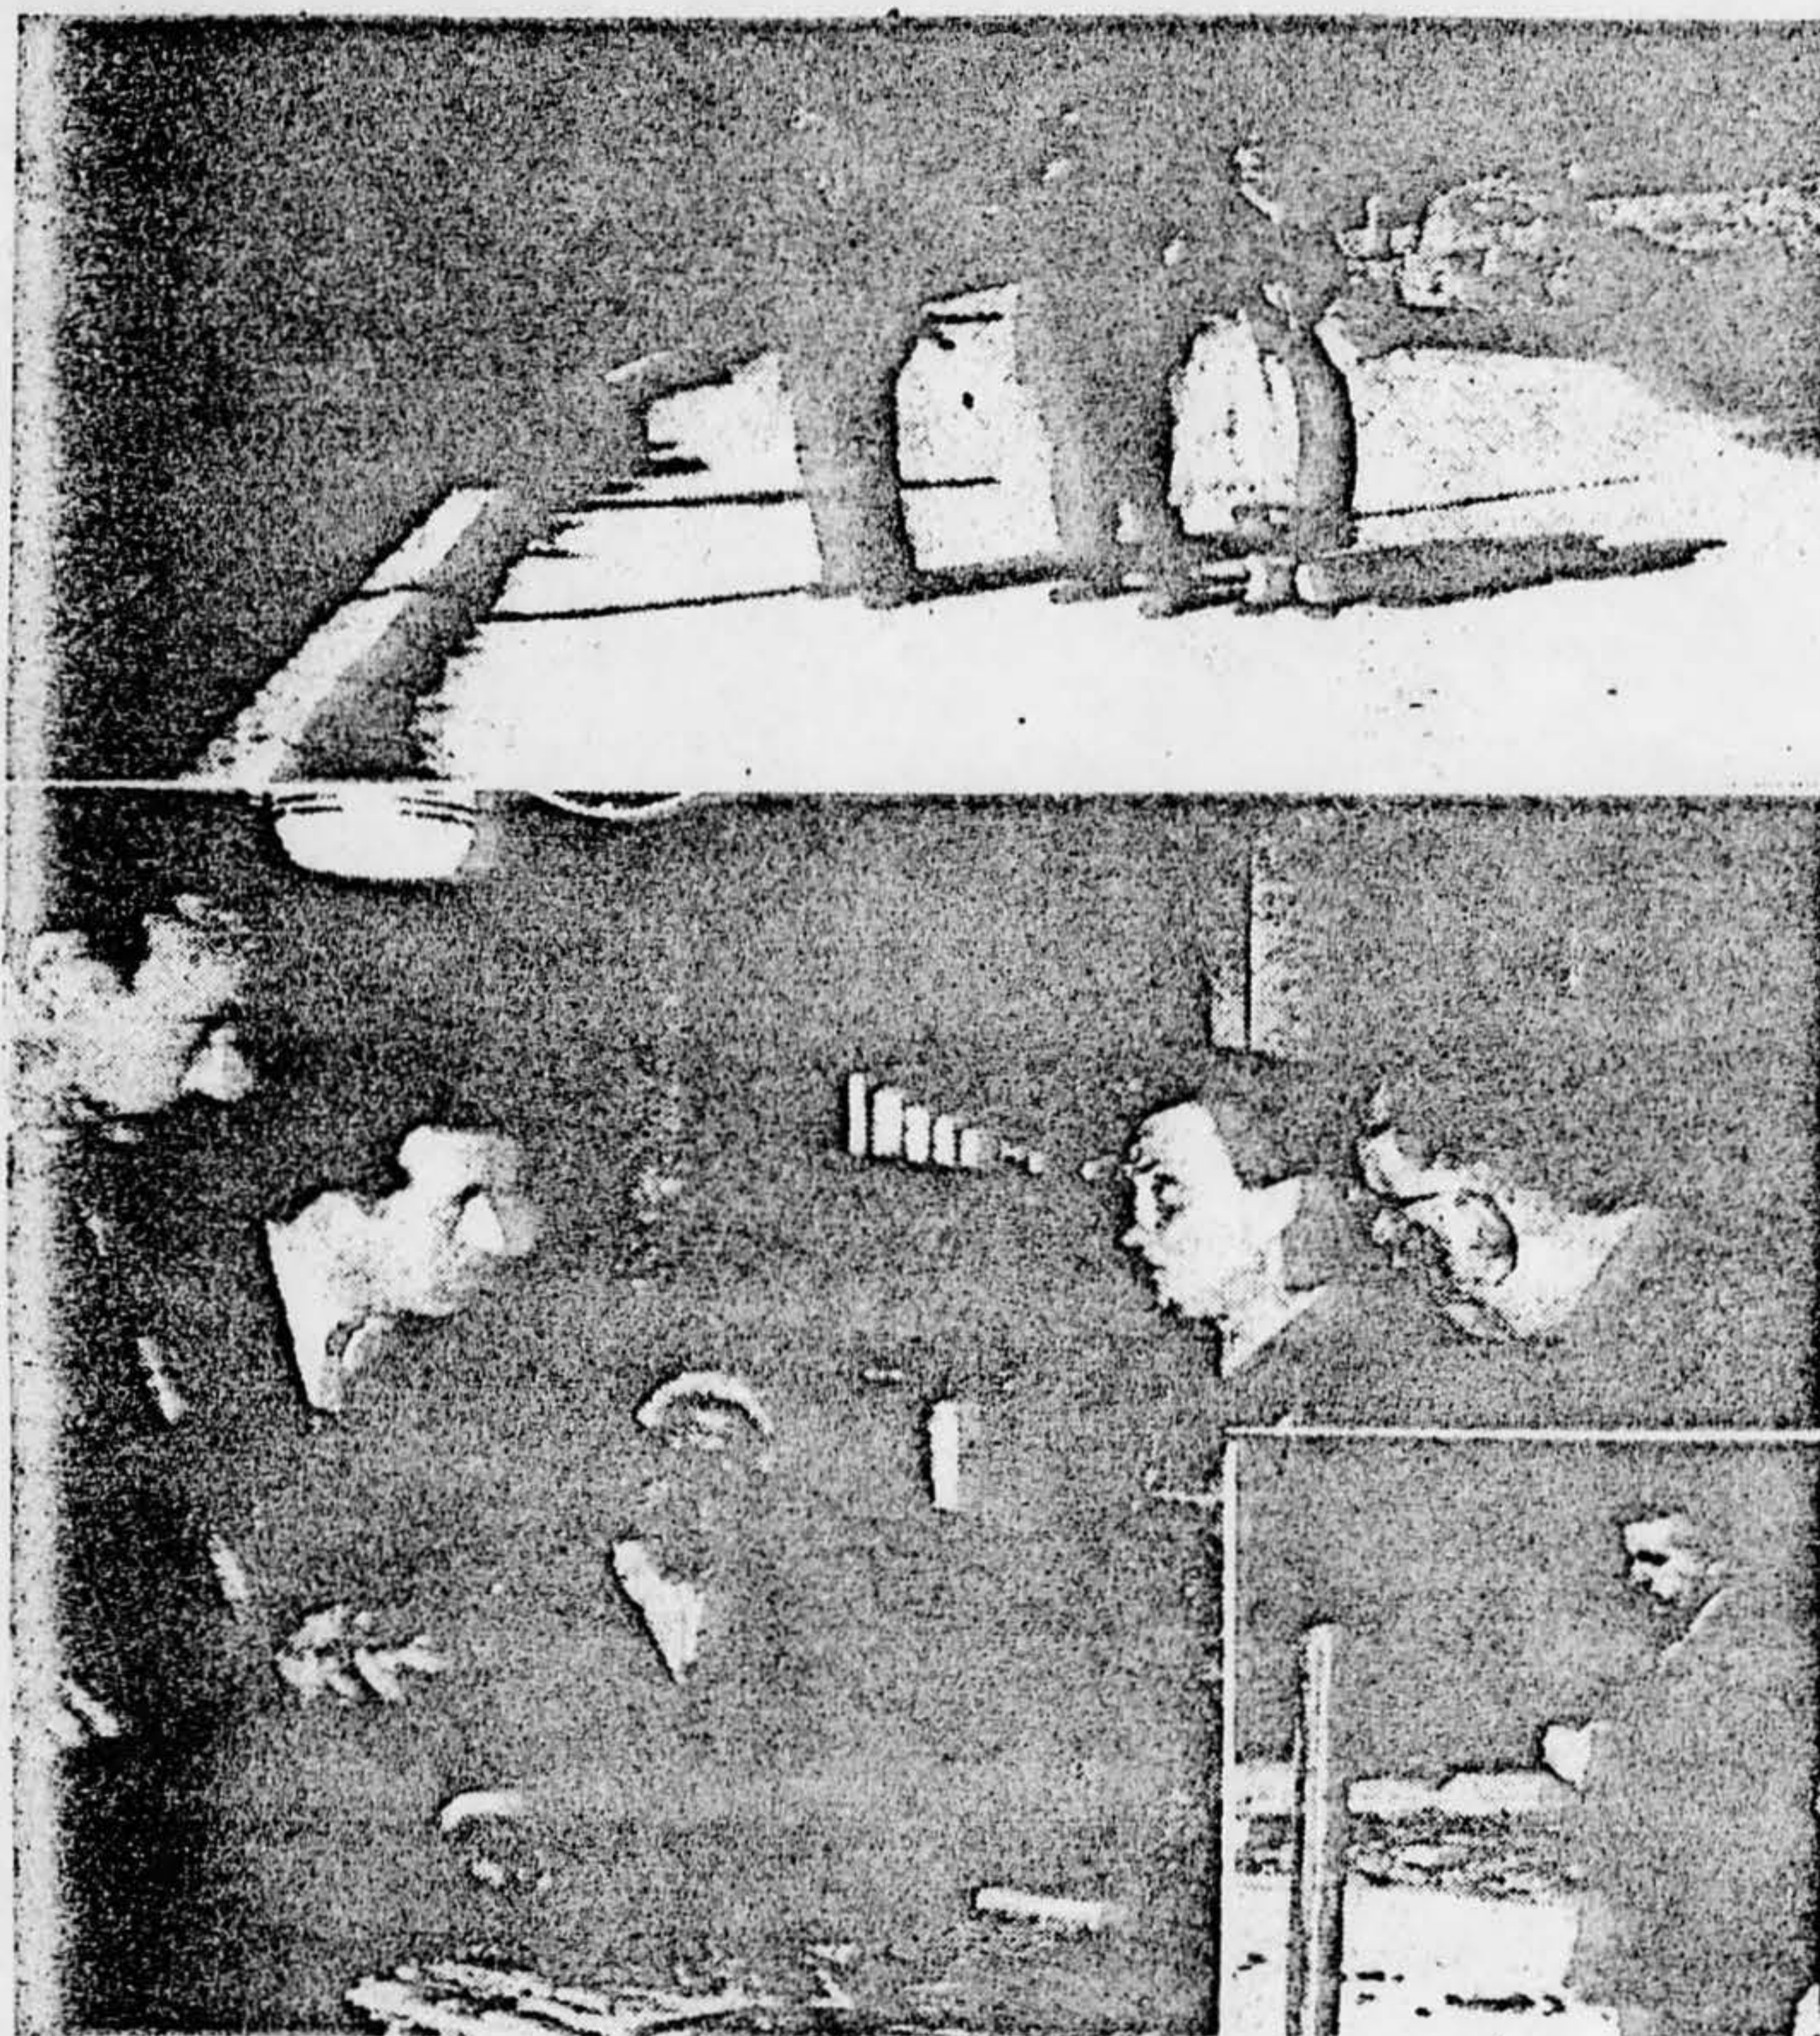

After its turn, the apparatus once more began utilization of the dignified signalling device (#2 on the diagram) which was subjected to brutal oscillations and violent vibrations that produced an awful noise, a "resonance" that was extremely remarkable. During the evolutions of the object, all of the witnesses saw the panels vibrate in a violent manner as if it had been subjected to repeated violent shocks at a very rapid rate.

Afterwards, the apparatus took off, pitching from side to side and all the time very silently towards a south-east direction, and at a very moderate speed. There was no moment when the apparatus itself did vibrate. The complete observation lasted approximately 1 minute.

Miss [REDACTED] warned her husband, who later accompanied by the policemen from Brignoles went to investigate the area. And, at the place of the supposed landing, the police do say that they did encounter a spot of land that was marked (on the path of the route that was supposedly followed) and the police did state that this piece of land did seem to have been swept under the effect of powerful blowers. On the path that was swept of land (second landing), the traces were still very clear. The ground was "flushed" on a diameter of approximately 1.50 meters.

On April 17, 1957, in the company of Mr. Pierre Ayraud of Radio Monte-Carlo, I went to the police station in Brignoles (Var). On the presentation of my identification card as a detective of C.I.E. Ouranos the officer on duty obliging gave me an account of the investigational report that had been conducted. He informed me that the witnesses were not only very respected and faithful, but they had never been caught in the act of any deceit or fraud.

GRAPHIC, NOT REPRODUCIBLE

Vins-Sur-Caramy - Top-Some tourists examining the landing spots. Bottom- Jimmy with Mr. Pierre Ayraud to his right questioning Mrs. [REDACTED] and Mrs. [REDACTED]. In the inset -Jimmy Guieu registering the magnetic deviation of one of the guide poles that was near the spot where the "object" landed

Not being able to accompany me to Vins, the officer gave me a letter of introduction for a Mr. Ventre that is the head officer in Vins. Arriving at approximately 3:00 in the village (at 9 kilometers to the north east of Brignoles) were we not able to get in touch with Mr. Ventre. I then went out in search of the witnesses and began to ask questions of the villagers. All of my questions were in vain as they had no new of anything! They did not know (or did not want to say) where the latter could be found. After a few minutes in the village, the news of our arrival made those that knew anything "flee" and the others only regarded us with suspicion. In other words already irritated by the press, radio, and television, and after 40 hours, the witnesses had gone in hiding in a near hill. Mr. [REDACTED] was working that day in a bauxite mine and, therefore, did not have any reason to also "go into hiding."

During our "search" of the witnesses, a front wheel drive Citroen automobile had stopped in the village square. The warrant officer (or comparable rank) of the Brignoles Police Station, followed by another corporal and another policemen stepped down from the automobile and made their way towards me....to come and supervise my investigation.

At the very first, the Corporal preemptively declared that the apparatus in question--the "teleguide" most likely came from the base on the Isle of Levant. I contested this affirmation explaining to him that no country or nation had an aircraft that could move in absolute silence! I also explained to the Corporal that if the signal poles could vibrate with such an amount of noise near the apparatus, this probably indicated that they had been taken into the general magnetic field of the propellers. General scepticism, I then offered to go and investigate the place that this occurred to see if there were any magnetic traces remaining.

Sceptical but intrigued my interlocutors agreed.

Our "4CV" followed their front wheel drive Citroen, and we arrived at

the place where the apparatus had landed the first time on Route D24. There in the presence of the police officers who, on my orders, were attentively watching and observing my experiment, I approximated my compass against the body frame of the "4CV" and was made aware of the amplitude of the deviation of the needle, approximately 3 degrees. And then I placed my compass to the right of the spot where the apparatus was supposed to have landed. The result was negative in relation to any trace of magnetic activity.

But, at 5 meters from this point, where the signal poles had been (#1 on the diagram) it made the needle of my compass skip approximately 5 centimeters, thus making a deviation of 15 degrees! Let us remember that the mass of the Renault had only made the needle skip 3 to 4 given degrees. I invited the corporal to conduct these same experiments, and the result was identical to those that I had conducted.

One instant later we then went up to the route that was followed by the apparatus in flight and to the right (approximately 100 meters) to the other signal pole where the apparatus had also passed. This pole (indicating to the Brignoles) is also magnetized and proved it by showing the skip in the needle of the compass another time to 15 degrees. Thus, on the third pole, that was situated in a direction towards the village of Vins-sur-Caramy at approximately 6 to 8 meters, the needle did not move at all on the compass. This test was negative clearing showing that the other two poles were greatly magnetized, and this really amazed the policemen. The latter also reenacted the investigations that I had previously conducted on the apparatus poles and reached the very same results and, therefore, came to the same exact conclusions.

Then we moved to the small path where the aircraft had supposedly landed the second; there was no remaining magnetism on the ground. Thus, the irrigation vane (0.40 meters to one side) that was opened (in a dry state)

revealed a remnant magnetism that made the needle of the compass move approximately 15 degrees, like poles #1 and #2.

The apparatus was then supposedly only 1.50 meters from the irrigation vane at the maximum. These tests were then repeated by the corporal, the warrant officer, and the policemen were also very important, and especially in the absence of the magnetism on the pole that was precisely the one that had not been submitted to the vibrations that the other poles had. Only a profound and appropriate study and investigation of these results could let one confirm that it was in fact related to a magnetic phenomenon that was natural or consecutive of the ground environment.

We returned to the village, thanks to the presence of the policemen, I was able to return and encounter Mr. [REDACTED]. The latter assured of the fact that I was an investigator (he did want to have to go through another interview for any newspaper), he was willing to go and fetch his wife and Mrs. [REDACTED] that were in hiding in the near hill. This is why I was finally able to talk with the witnesses. Our interview was recorded on a tape recorder by Engineer Mr. Pierre Ayraud and released on the same day on (April 17, at 7:08 p.m.) the Radio Monte-Carlo Chain Stations.

Note:

In contrast to what the press has announced, the D. S. T. is not investigating this event. On the morning of April 17 (before my departure) the D. S. T. indicated that only the Air Police would become involved. I, therefore, got in contact with the Air Police where Inspector Rochu confirmed that in relation to the Draguignan and the fact that they were on the way to the spot the apparatus had been seen. This took place exactly 4 days after the event.

I tend to have to place emphasis on the diligence and the objectiveness of the policemen of Brignoles. The latter sent out, without a delay, detailed reports to the Air Police, the Minister of the Interior, the Commander of the

IV Air Command and several other official organizations. A second report that was made up from my own personal investigation and mentioned the personal remarks and tests (magnetic measurements) has been, I believe, sent by the Brignoles police force to the Air Police of Marseille where it should have arrived on April 19.

Jimmy Guieu

Case #2 - Palada (Pyr, Orient.) April 22, 1957

Investigators: Jimmy Guieu - Chief of Investigational Bureau of C. I. E. Ouranos.

Dr. Marcel Pages - another investigator of C. I. E. Ouranos for the Oriental-Pyrenees Region and the medical representative and engineer.

Jacques Verpillot - an investigator from Marseille that is also with the C. I. E. Ouranos.

Data: Mr. Paul Juabert, a retired judge wrote the C. I. E. Ouranos in Palada.

Eye Witnesses: Mr. and Mrs. [REDACTED] who live in Palada in the village of Amelieles-Bains. (P. O.).

On Monday, April 22, 1957, at 1:00 p.m., Mr. and Mrs. [REDACTED] could be found in a little wooden cabin on the far side of their wine vineyards after lunch. Mrs. [REDACTED] was washing the dishes when all of a sudden she heard a terrible racket and noise all around the little cabin. She ran outside and when she glanced up, she observed an enormous whirlwind of blue and red flames that at approximately 10-15 meters of altitude began to descend on the vineyards.

Frightened, Mrs. [REDACTED] asked her husband to come and join her and see what she was frightened about. The "thing" had the aspect of a cone of flames that were whirling around the "thing" itself at a slightly turning speed, but the "thing" did not displace even slightly from its bearing.

The flying object stopped for approximately 1 minute at 5 meters from the western part of the field. It maintained itself at an altitude of approximately

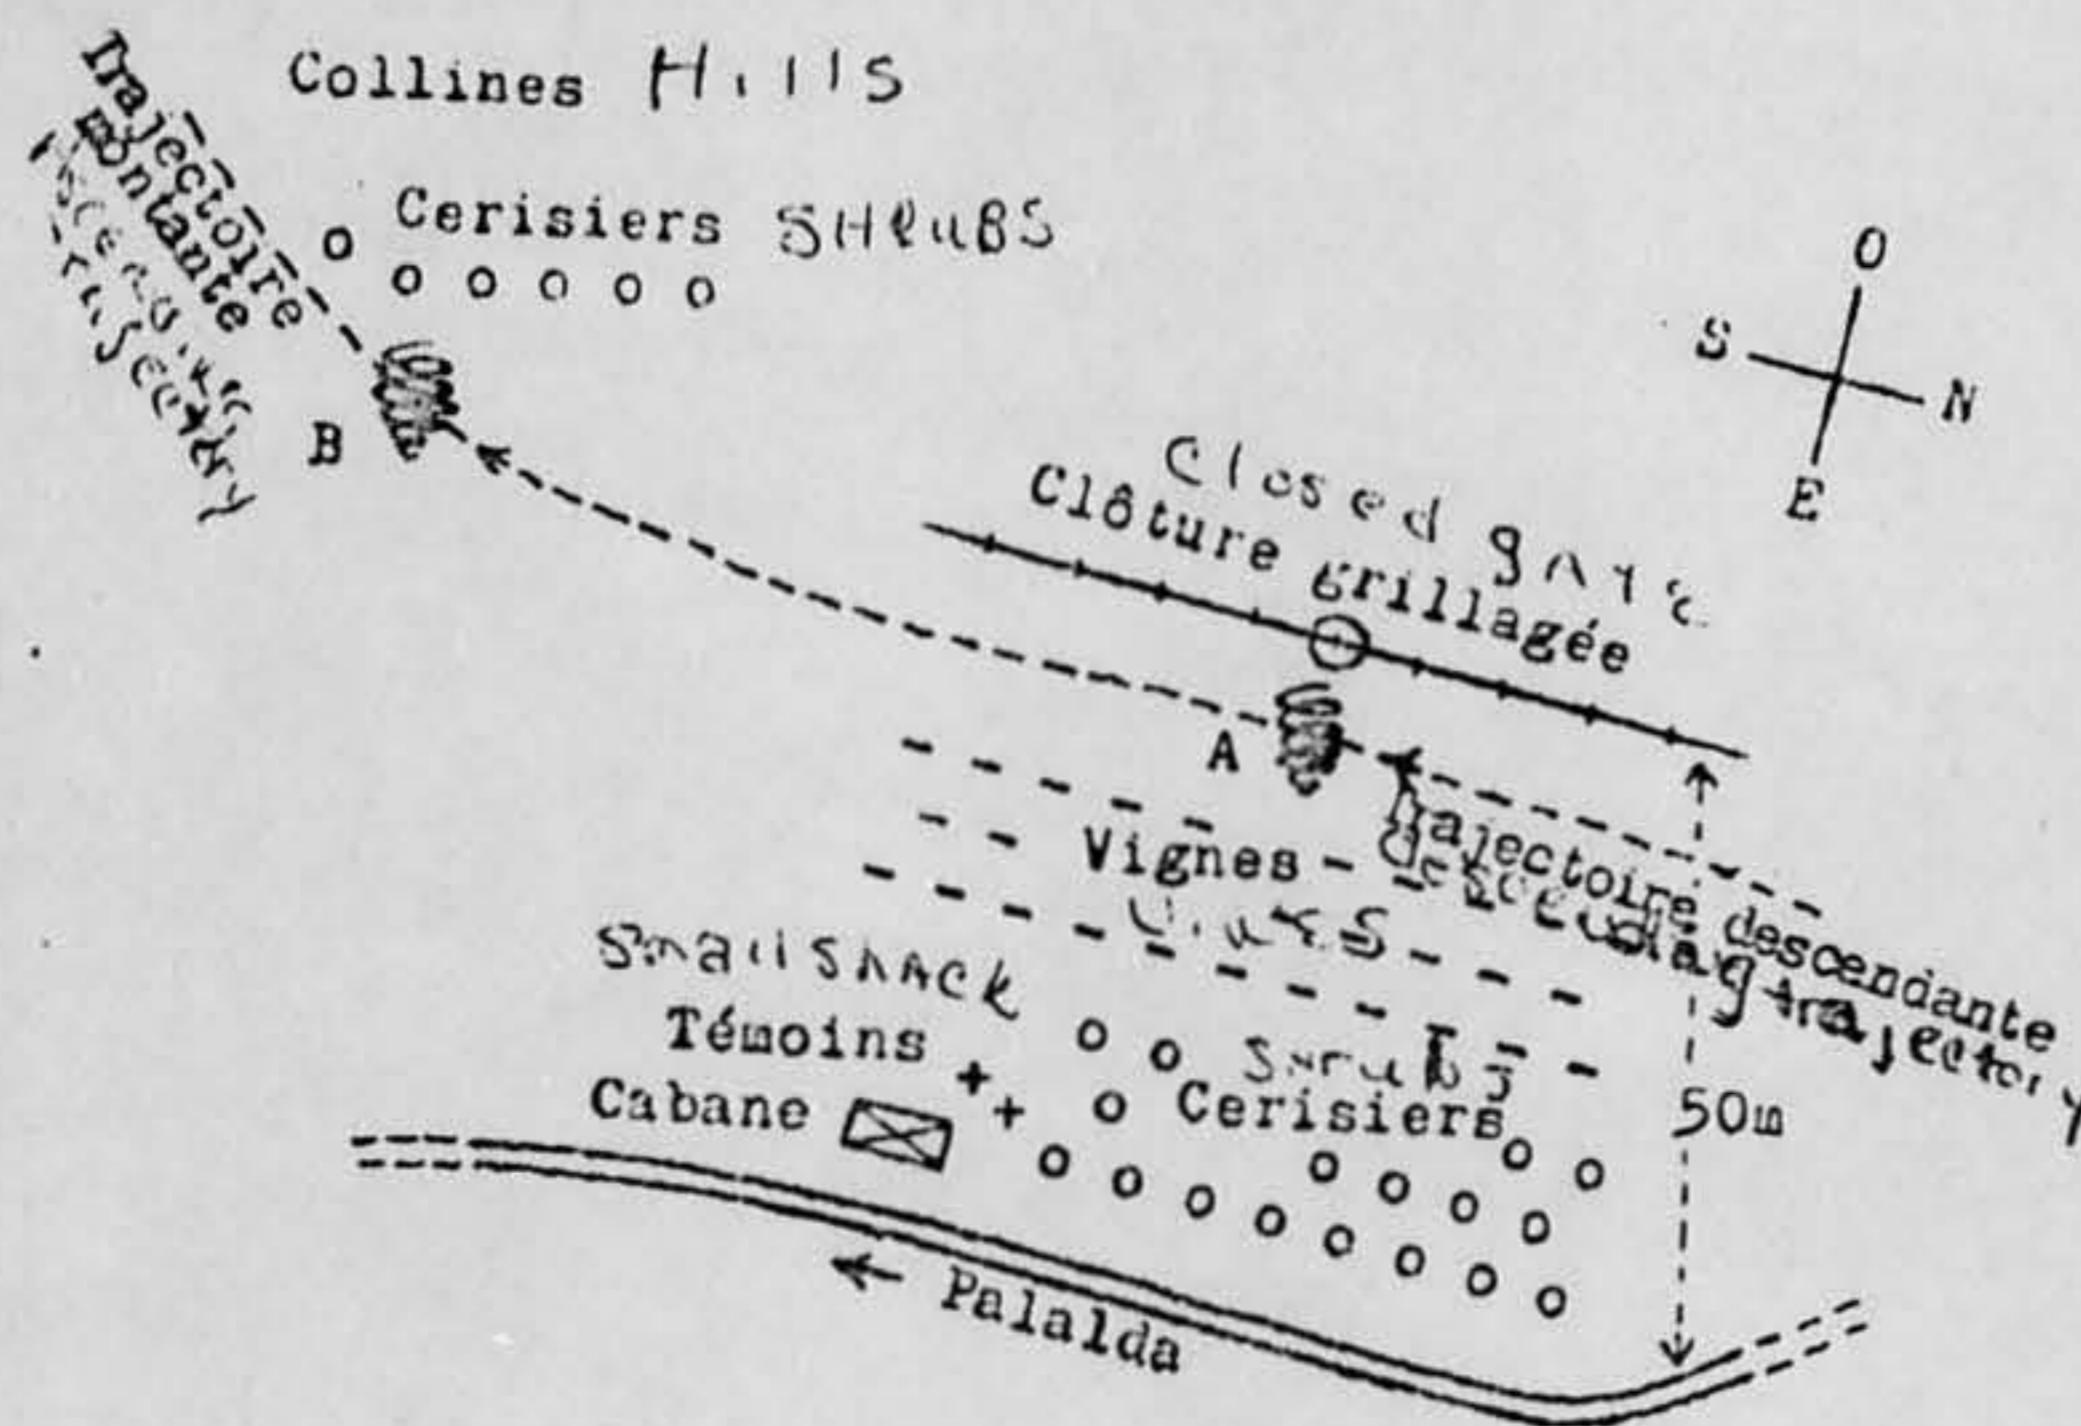

Plate - A = First immobilization  
 B = Second immobilization

Under A - Around the circle only the metallic poles had any magnetic resistance. Then one month later, the third pole to the left of the latter had also acquired the magnetism.

Washington 25, D.C.

TO: U. S. Air Attache  
American Embassy  
Paris, France

1. In accordance with AFR 200-2, request action be initiated to determine the general facts surrounding a UFO reported to have landed at Brignoles, 9 kilometers west of Vins-Sur-Caramy. Your attention is invited to Inclosure Nr. 1.

2. Action taken should be of informal nature, and should not result in any undue inconveniences or interruption of your normal operations.

3. While no credence is given this report, previous experience with incidents of this nature dictate the USAF intelligence files should indicate that some official action had been initiated, in the event any official or public inquiries are made regarding this incident.

5 meters from the ground. In the course of the first stop, the vine stocks were strongly agitated, and so was the ground as they underwent a sort of aspiration that was directed in an upward direction (therefore, towards the apparatus) and the apparatus was meanwhile violently whirling. The object whose giration on the spot was accompanied with a deafening sound, recovered the flight above the field, and then descended towards the south at approximately 400 meters from the first stop at 5 to 10 meters from a clump of trees (cherry trees) in a gap in the ground near a bridge.

The gyrating cone created a violent turbulence (?) that brutally and roughly made the leaves and the branches of the trees shake. The latter, according to the witnesses, were bent in several manners. Their branches and leaves seem to be on the point of being yanked out. The cone of red and blue flames once more started on its slow course and trajectory and then climbed the direct side of a hill (at approximately 30 meters from the ground), then having reached the top of a hill, it rapidly ascended into the sky at a very rapid rate of speed and disappeared. The latter disappeared in a North-Easterly direction.

At no time did the witnesses see the so-called "apparatus" itself; all they claim to have seen was the turbulent mass of whirling flames that were red and blue and were in the form of a cone and the point of which was directed towards the ground, and the peak of the latter was approximately 5 meters long.

The witnesses could not be exact in relation to the form of the apparatus as the latter was completely covered with flames that were oscillating in all directions and whirling, but they did think that the ensemble on the whole seemed to have a cone-shaped aspect.

At the place where the O. V. N. I. (U. F. O.) stopped at the first time in the vineyards, the ground violently jarred and was shaken. Even though the apparatus was only 5 meters from the ground, we found no trace of burned spots on the ground or any hardening of the ground. Therefore, one is not really

dealing with "flames" but with some phenomenon of ionization.

At approximately 5 meters from the immobilization point, we found a metallic fence in very bad condition, of latticed irregular links and metallic wire lattice posts. The other part of the fence had wooden posts. Only the wire post (approximately 1 meter high) that was situated at approximately 5 meters from the immobilization point presented a magnetism. This magnetism made the needle of the compass undergo a 30 degree deviation. The 30 degree deviation in proportion to the proximity of the compass.

Thus, the other wire posts (that were situated at approximately 5 meters from the magnetized T-shaped wire fence post) did not present any magnetism. Thus, the latter did not barely make the needle vary at all. This remained constant even when the compass was placed within 4 centimeters of the latter. This negative tests results tend to prove, on the one hand that the mass of these bars (all of the same nature) is not sufficient to provoke a sensitive deviation of the needle with the only exception being that it was already registered and is in absolutely no way an inherent quality of this metal.

There was no trace of magnetism on the ground near / <sup>the</sup> immobilization points and the around the object was supposedly present.

These tests and these reports have been executed in the presence of Mr. Jacques Verpillot and Paul Jaubert that are related to the C. I. E. Ouranos in Palada.

We were rejoined in Amelie-les-Bains by Dr. Marcel Pages, who is the investigator of the C. I. E. in the Pyrenees-Orientales province, Mr. M. J. Verpillot and myself went to the police station of Amelie-les Vains, where we were received by the warrant officer Mahoux and the policemen Poudade and Earbe. We have received the observations that had been made by the latter in Palada and on the testimonies that were supplied by the eye witnesses and also placed on tape.

These observers were surprised at the lack of respect that the witnesses

the noise that was reported by the witnesses even though it was also subjected to the same type of vibrations.

We are therefore, dealing with two types of apparatus that are similar in form and size, and in their managability but different in "mechanical" manifestation as although they apparently are similar, they are both silenced by means of some sort of a special device that utilized the magnetic field.

Conclusions:

No nation on the earth has aircraft that are silent in maneuvers and silenced by a propellor system and, therefore, it is ipso facto that these apparatus come from another world. On the other hand, the new type of apparatus that have begun to be manifested in a singular manner let one suppose that other apparatuses of this type will soon appear. It will, therefore, be indispensable that the witnesses that should observe these "phenomenons" not hesitate in informing and placing themselves in touch with police stations or our Investigational Bureau, or the press.

Jimmy Guieu

Note:

A new magnetic examination was conducted by D. Pages one month after the investigation, and the examination by Jimmy Guieu. This indeed exposed the fact that metallic posts had an inversed rate/<sup>of</sup> magnetism. The almost exact same as in Vins one can ask whether or not the proximity of the apparatus can possibly cause the apparatus that are near to be temporarily neutralized in relation to their normal state and yet cause others to be modified or increased? Periodical measurements will be conducted on these pieces of fence in order to establish their eventual magnetism.

Case #3 - Beaucourt-Sur-Ancre, May 10, 1957

Investigators: Marc Thirouin - The general different director of C. I. E. Ouranos

Y de Saint-Aubin - the Secretary General of C. I. E. Ouranos

Jules - reporter and investigator of C. I. E. Ouranos for the department that is located in Somme

Eye Witnesses: Mr. [REDACTED] - a highway maintenance laborer of S. N. C. F.

Mr. [REDACTED] - a S. N. C. F. road-mender

Mrs. [REDACTED]

Mr. [REDACTED] - an equipment man for S. N. C. F. and the municipal counselor of Beauxourt-Sur-Ancre, along with some others

Others: Mr. [REDACTED] retired, and Mrs. [REDACTED]

Mr. [REDACTED] - a farmer; all of them from Beaucourt-Sur-Ancre. Some others

The narration and testimony of the witnesses.

Mr. [REDACTED]. On May 10, 1957, my wife and I were in the company of some neighbors (Mr. and Mrs. [REDACTED]), who had come to pay us a visit. We were in the kitchen; my wife left and went to the bedroom where our son lay ill. At approximately 10:45 p.m., we heard someone tap on the kitchen windows, and so we opened the window and there we saw Mr. [REDACTED], a Hungarian refugee, who has been here since 1942, all panting and puffing; he kept repeating, "They attacked me, they attacked me!" At the time of all the confusion, we asked him to please come in and we dimmed the lights. In very whispered words, he told us what had happened and why he was so frightened, and we listened attentively, then we looked out the window.....

Mr. [REDACTED] On May 10, 1957 at approximately 10:45 p.m., as I was riding home on the route that comes from Beaumont on the way to Beaucourt-Sur-

Ancre coming from church. Upon arriving at the level of the electric transformer at the turn in the highway that at this time of the night and at this side is generally deserted, therefore I was very surprised to observe a very powerful flare located on the highway. After observing the flare, I observed four silhouettes of human aspect that seemed to be blocking my way. Very strongly amazed at this arrangement that immediately struck me as being an ambush so that I jumped from my bike and ran to take cover behind the transmitter device and through a foot path, and after a rather long detour, I stumbled upon the house of Mr. [REDACTED]. I tapped on the window of their kitchen, and they let me in, and then I explained to them what had happened, and what I had done.

Then all of us observed the latter from the window. Mr. and Mrs. [REDACTED] then Mr. [REDACTED] who had also passed along this route.

Mr. [REDACTED] - through the window of our kitchen, we observed all five of these humans on the open route to Miramont at less than 50 meters was a brilliant light whose color would blink on white then turn to dull red. Then so that we could see better, we went to the door. The light remained more on the red than on the white. When it was white, it appeared to be the fire of a very powerful floodlight projector, and it was blinding.

This light cast a reflection to the back of it, and very near this we observed three figures that appeared to be that of three men who could not measure more than 1.50 meters standing on the highway in an immobile manner, their arms hanging along side their bodies and half-hidden by the slope of the hill. They seemed to be dressed in a greyish-beige outfit, and their heads seemed to be very somber colored although we did not get a good close look at them.

An automobile passed along the open highway and the headlights of the auto let us have, for a brief instant, another look at the three, still immobile, figures.

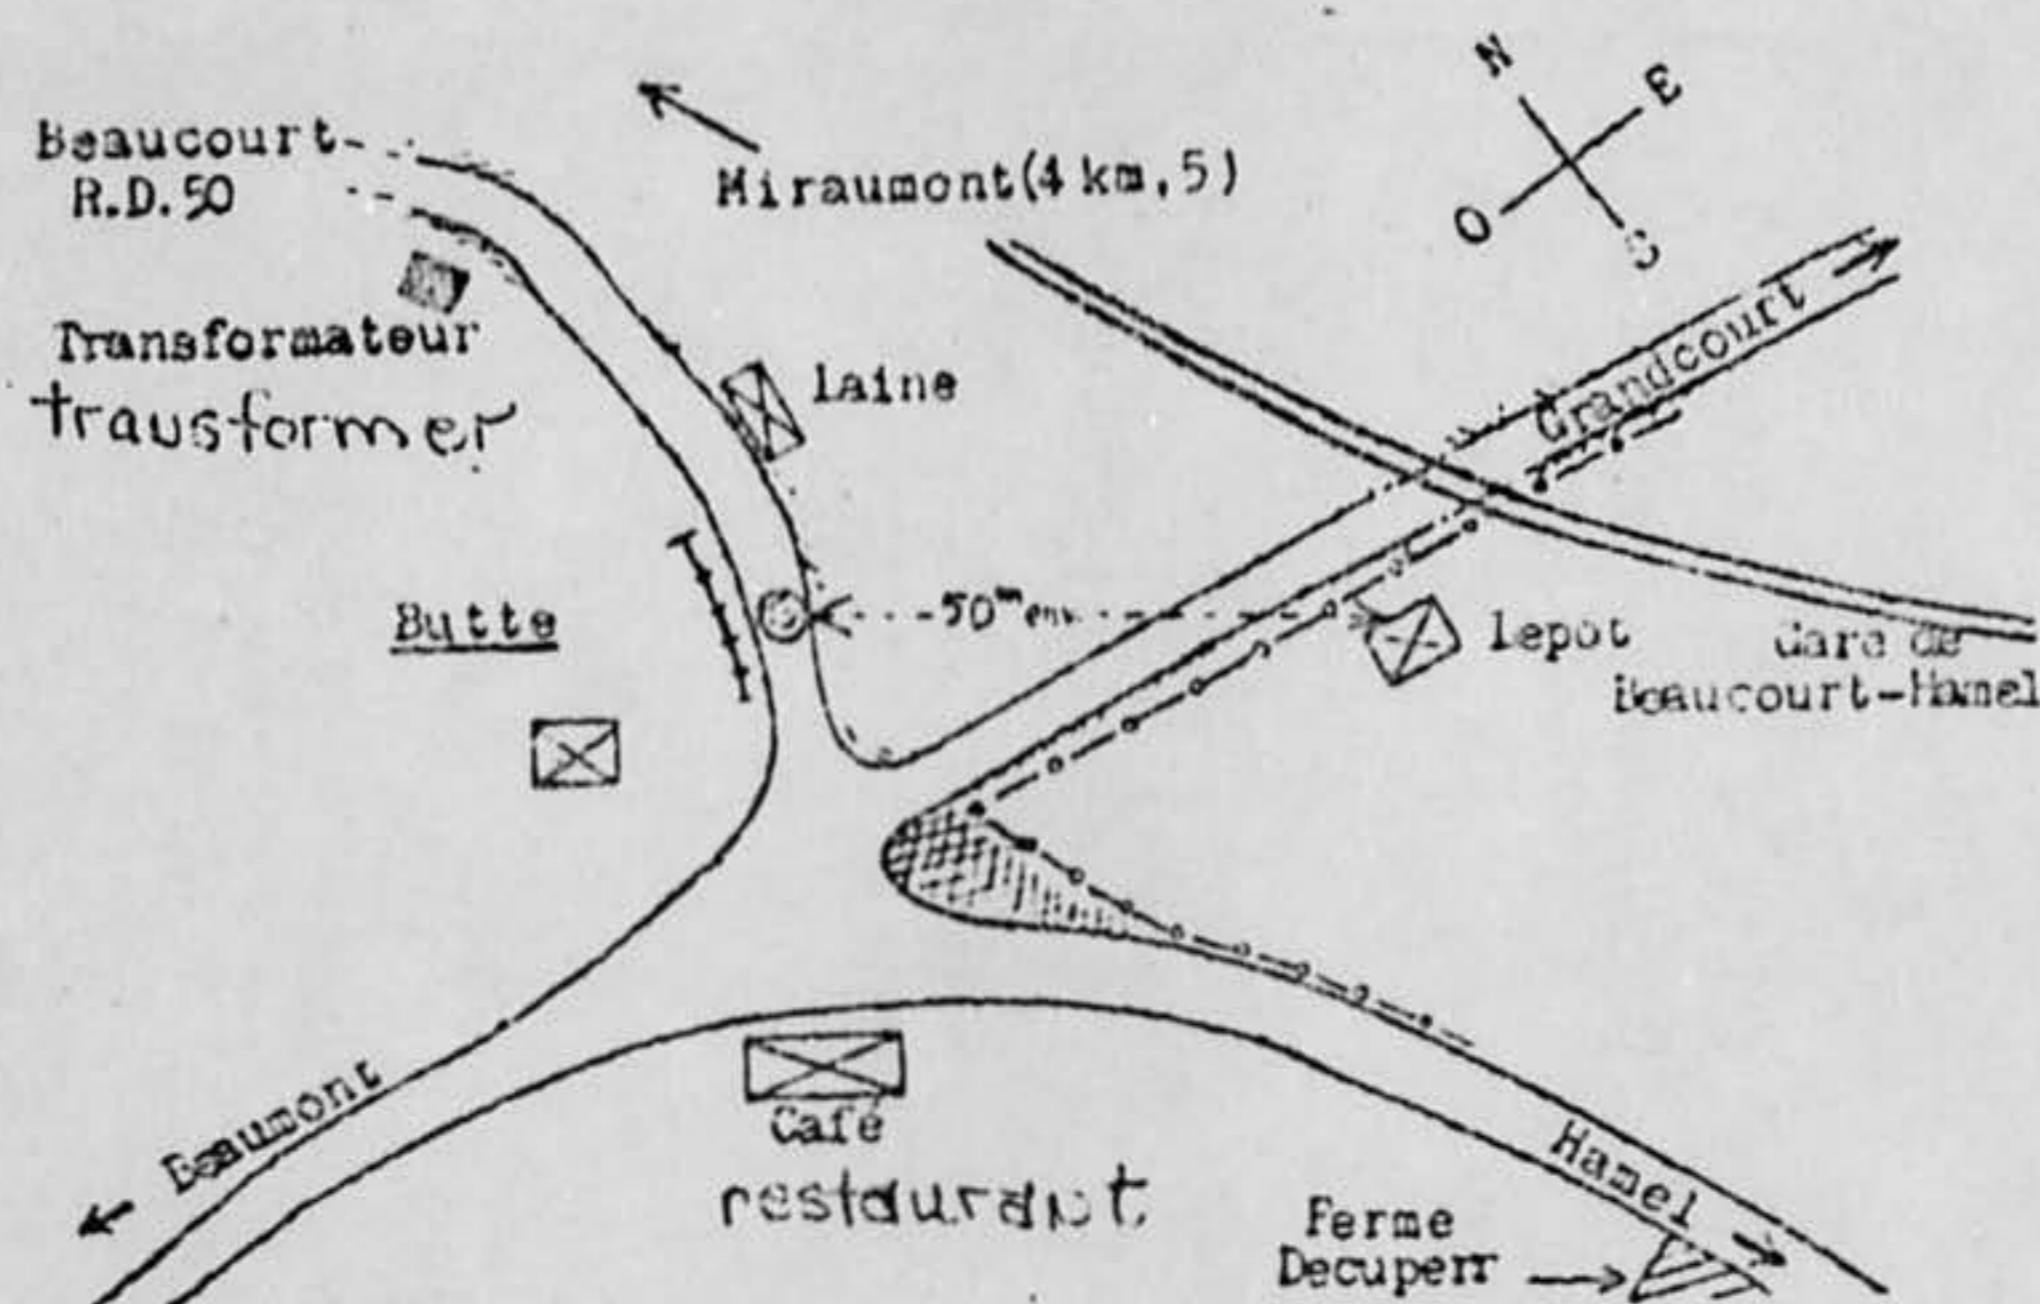

Plate 3 - In the circle, are the black sets of marks and the landing spot.

Along the edge of the route, the lattice work and the metallic fence posts (wire in T form).

The distance that is indicated is thought to be the maximum.

After the automobile passed, the white light reappeared but less blinding and higher above the level of the highway. We saw it shine in the sky at approximately a  $45^{\circ}$  angle towards the North-East approximately towards M. Chantelain and without a single sound made. This all took place at approximately 11:15. The light started to fade. But approximately 15 minutes later, it once again appeared high in the sky above the church (to the North-East). It seemed that as it flew away, its brightness diminished. Soon we lost sight of it.

Towards the end of the observation, I went to the station behind the house to warn my colleague who was still on duty (Mr. [REDACTED]). He promptly joined us and observed the light taking flight.

We called the police in Albert and approximately a half-hour later, they arrived. We accompanied them on the highway right to the place where we had seen the light and the beings.

There, we were all surprised upon encountering the presence, on the highway, of approximately 12 different sets of forms. These were all of different dimensions and widths and black as the casting of costly tar. This was divided along the periphery of a circular area of approximately 3 to 4 centimeters in diameter and had a width of one centimeter. This soft substance was slightly sticking to the ground and we were able to remove it by rolling it on itself as if it were crepe paper. It had no trace of circulation except that of the tire mark of an auto that was probably the auto that we had seen pass during the time we were observing the other phenomenon, and I now refer to that auto that appeared approximately 10 minutes after the light disappeared.

The next few days, these traces were flattened; they also stretched and adhered to the ground, and it was then impossible to remove any more of this substance.

This substance was not tar because it had a slight stool odor. The five other witnesses, Mrs. [REDACTED], Mr. and Mrs. [REDACTED], Mr. [REDACTED] and

GRAPHIC, NOT REPRODUCIBLE

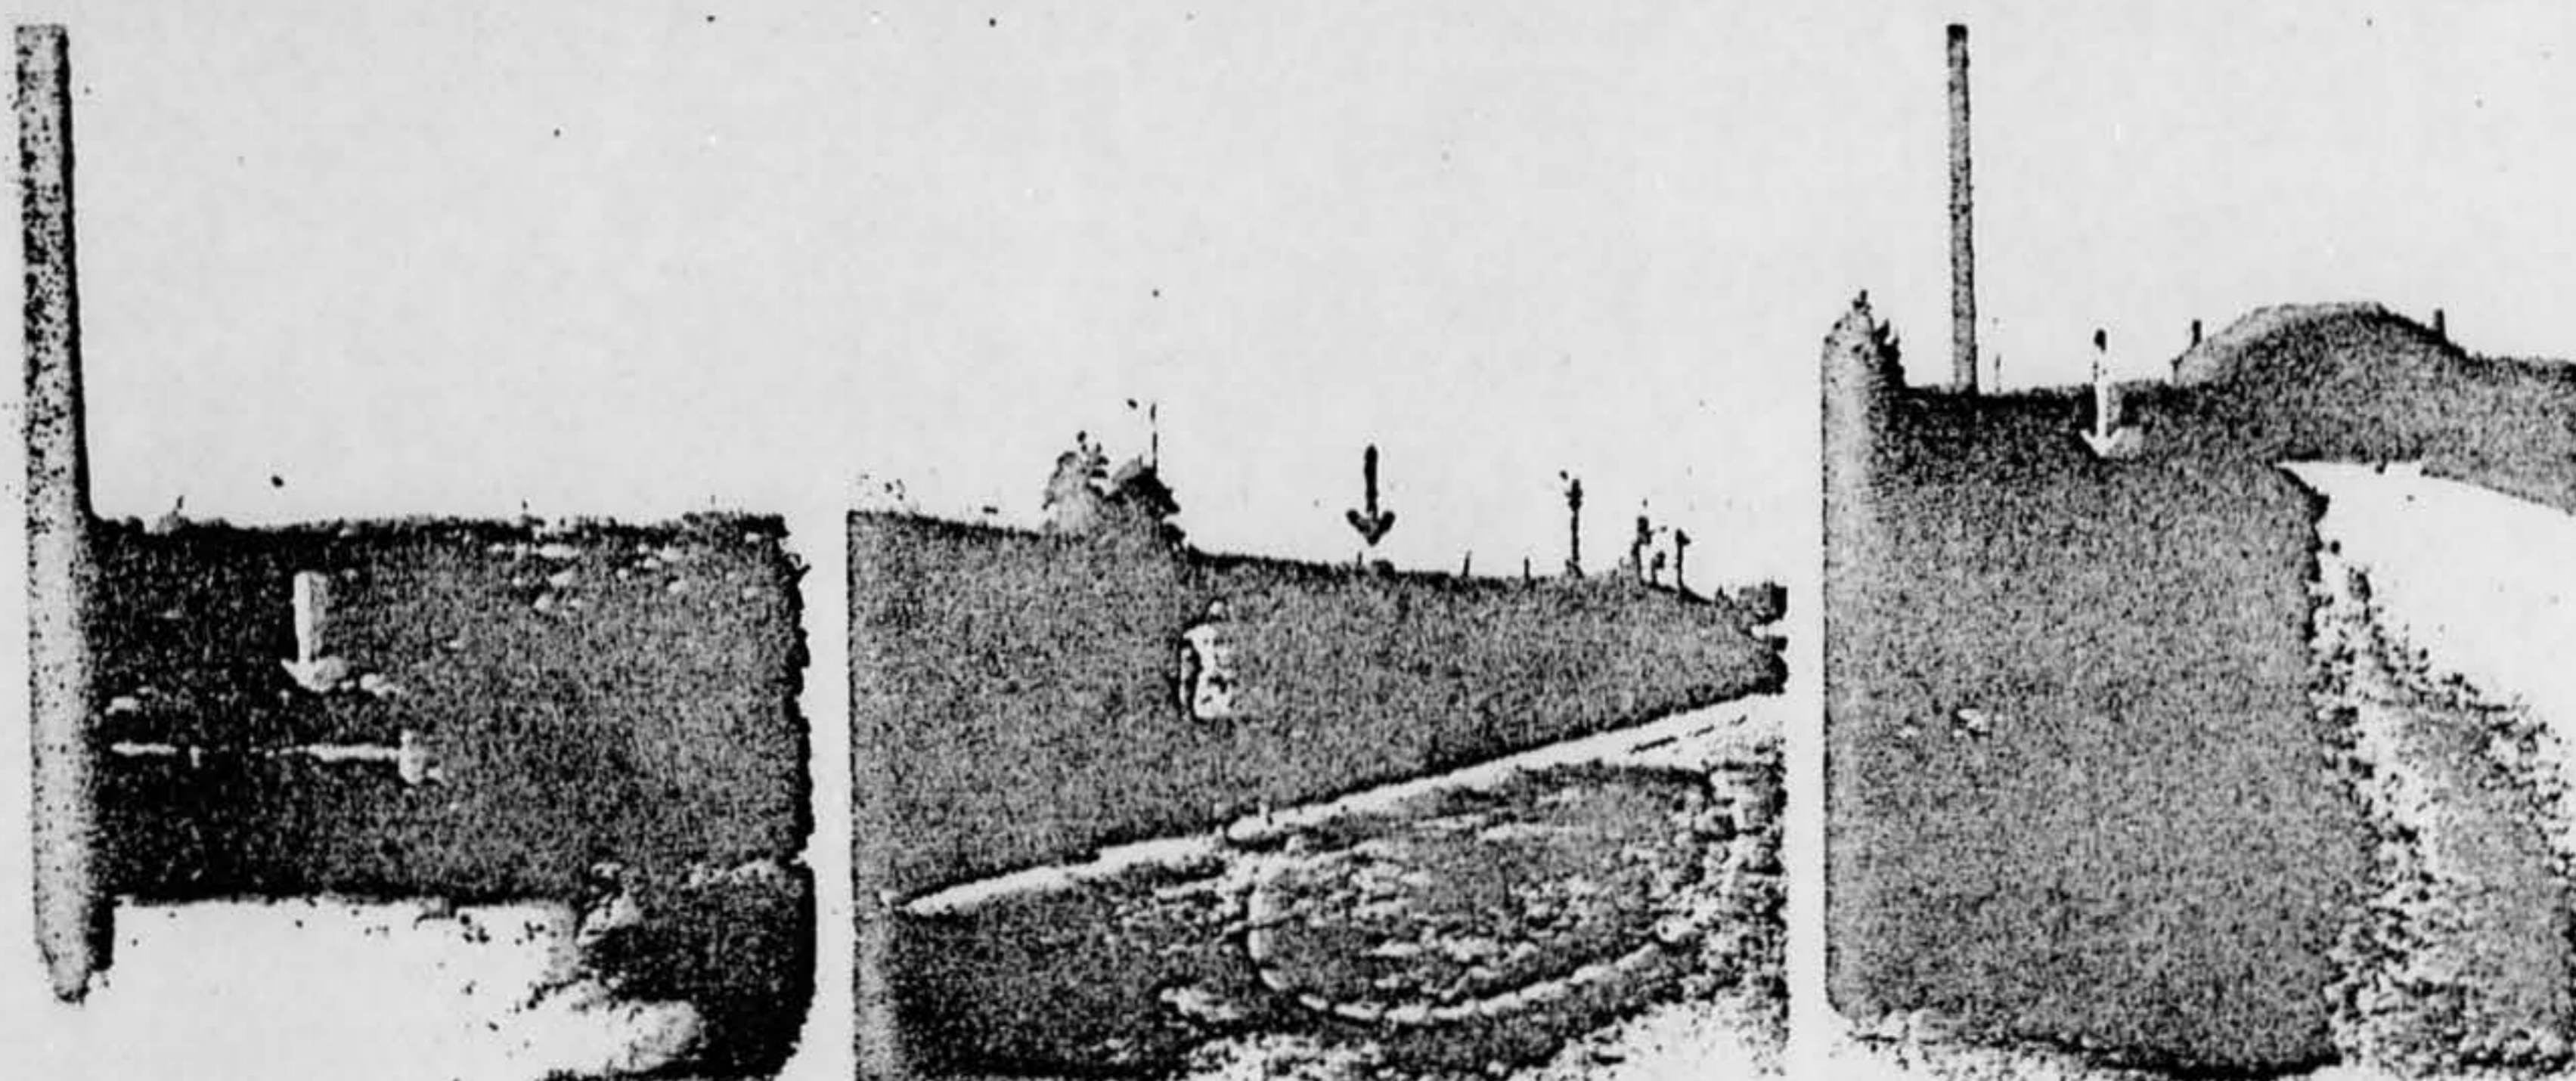

Plate 4 - To the left - The view that was taken from the window of Mr. [REDACTED]. It apparently was from here that the witnesses saw the light of the Projector and the three "small men." The distance from the window to the arrow does not surpass 50 meters. Above the high shrubbery that borders the highway is behind the arrow. The pasture where the cows are let out that belong to Mr. [REDACTED]. Let one eventually remember the place that this occurs so that no confusion is, therefore, credible.

To the right - Next to our general secretary and the dotted white lines one can observe the sets of marks that were left, near the place of the observation and the surrounding area. These marks were well worn over a period of time and are presently not quite so noticeable as they have been smoothed out, but one of them still bears a distinct tire mark of the automobile that passed that night. To the right we see the transmitter. The arrow indicates the place where Mr. [REDACTED]'s farm is located in the background.

To the right - View that was taken from the highway, but in the opposite direction. There one sees the house of Mr. [REDACTED]. The arrow indicates that area of the field where the "object" was stopped and Mr. [REDACTED] and Mr. [REDACTED] saw from their windows. To the right of the arrow, one sees the cafeteria. This all occurred at 3:00 p.m. one night.

Mr. [REDACTED] were all questioned individually, and they all confirmed this report.

Examination of the sets of substance on the highway

At the site that had been indicated by the witnesses, we examined the previously described pieces of matter. They appeared to be similar to stretched pieces of tar on the highway, but they did not contain any gravel in contrast to that tar on the highway, and they did not stem from the highway, and were definitely not part of a piece that had been worked on as the highway in this section was in good condition.

We did try to use a knife and remove some of this, but it adhered to the highway and to the knife and to our fingers and was very difficult to remove. It did not smell like tar and rather gave an odor that was even worse than tar. However, the latter did not seem to smell like cow dung as was previously stated.

We lifted some of <sup>the</sup> particles of the highway that also seemed to smell like the characteristic tar odor.

At some hundred meters of the latter, in front of a monument for dead, we removed some of the highway that had been patched, and it seemed to be similar to the mysterious substance that we had encountered although it did not smell like the latter.

We subjected these three pieces to the flame of a bunsen burner and the repair piece of the highway gave off the well-known odor of hot tar, and the two other pieces, although they were equally subjected to the flame gave off no recognizable odor with the exception of one that slightly resembled glue or wax.

These pieces are presently still being analyzed but the experts to whom we submitted these pieces for examination have informed us that the mysterious substance is not tar, but asphalt and the crackling that was produced during the subjection to the flame was probably due to some form of hydration, be it

accidental or not.

Anyway, any way that one looks at it if we are dealing with a known substance, then the presence of the latter on the highway is, therefore, explained and also explains the cracked pieces that were encountered over an area of 3 to 4 meters in diameter. In this small province of 195 people, the passing of an asphalt truck would not go unnoticed and, at 10:45 at night, it would be an unlikelihood. Even a leak in a nozzle would not have left such traces. We examined the approximate bridges and highways for some other clues.

#### Cows and storm lamps

We know, through the press the almost official version that has been accredited to the statements of the Mayor of Beaucourt, Mr. [REDACTED]. According to this version, Mr. [REDACTED] left his house about 11:30 p.m. carrying a storm lamp to try and check on his cows (one of them having died) going to the pasture that is next to his farm and extends up to an intersection of the Miraumont highway route.

This could possibly be the lamp that the witnesses saw as having been the projector of red and white glaring lights, then the same light that they saw in the sky and the same that the 4 or 5 men that they saw eventually would have been Mr. Chatelain's cows.

Or, we do not want to make remarks on the ridiculous of this situation, and its interpretations. Only a glance at the photographs that we publish here and the diagram and the explanations and testimonies of each of the witnesses leads one to believe that the "cows and storm lamp" version is only one of a state of mind.

Let us suppose that an experienced railroad man should confuse, comparable to the eye witnesses, that look into the sighting position and signal lamps should confuse the glare of a projector (floodlight) that blinks on red and white with that of a small storm lamp. Imagine! This could not happen, and

REPORT OF INVESTIGATION

## OURANOS INTERNATIONAL COMMISSION OF INVESTIGATION

(for the study of UFO and connected problems)

Investigator: Jimmy Guieu, Chief of Service of Investigations

Surnames and Given Names of Eye Witnesses: Mrs. [REDACTED] — 73 years  
" [REDACTED] — 65 "  
Mr. [REDACTED] — 50 " (?)

Their Address and Place of Observation: VINS s/CARAMY (Var), France

Date of Observation Sunday, April 14, 1957

Time: 15 o'clock

Sunday, April 14th at 15 o'clock Mesdames [REDACTED] and [REDACTED] were walking along the road D.24 at about 1 kilometer to the east of Vins s/Caramy, when suddenly at about 100 meters from their position there landed on the road a curious metallic machine (of dull metal color) in the form of a cone, the apex pointed downward. The object resembled somewhat a big top (convex crown) with a maximum height of 1.50 meters and diameter of about 1 meter. Perpendicular to the walls of the cone there were metallic stems which were being agitated rapidly.

At the instant that the machine was maneuvering to land the witnesses heard a deafening rattle. This "metallic" noise was produced by a flat road sign (No. 1 on the attached drawing) situated about 5 meters away from the point of landing, which vibrated violently.

Mesdames [REDACTED] and [REDACTED], being frightened, at the same time uttered a cry of stupefaction immediately following the rattling.

Alerted by the noise and by the cries, Mr. [REDACTED], 300 meters away from the spot doing something at an anuary on a hill, came rushing down believing that there had been an automobile accident. When it was that he saw the machine land and again heard the strange metallic vibrations. The "cone" made a jump up off the road, made a turn (towards the east at 5 or 10 meters height at the maximum) and went to land a second time on a little road some 200 meters away from its first landing spot.

At the time of its turning it flew over a second road sign (No. 2 on the drawing), which it also caused to vibrate violently, and with these vibrations it produced a noise, a very significant "resonance." During the evolutions of the object the three witnesses very distinctly saw the panels vibrate, just as if they had been subjected to violent shocks repeated at a rapid cadence.

Finally the machine takes off pitching from side to side and it went away quite silently toward the southeast at a moderate speed. At no moment did the machine itself make any sound. The observation lasted about a minute.

we will not believe it!

Let us add that of the reconstitution that proceeded the night of the famous storm lamp, in the pasture of Mr. [REDACTED], has amply demonstrated the fact that no confusion was possible insomuch as that is related to the intense light and the color that the trajectory and the speed of take-off that are retrospective of light has no comparison.

What exactly did Mr. [REDACTED] say?

We asked Mr. [REDACTED] for his version of the facts. But to be truthful, the Mayor of Beaucourt does not seem to ever have had any real version of facts.

Without a doubt, and in front of the police, it is true that he pretended to say that his wife was the one that had left the house about 10:45 p.m. and 11:20 p.m. But this is all at least one hour later than the event that is presently under investigation, and then he said that his wife went to bed at 11:30 (this does seem possible because farmers do go to bed early). And then the next day in front of the Municipal council, he pretended that he was the one that went out towards the above mentioned hours, and he had his tractor with him (this seems a little less believable).

When at last we asked him for his unbiased opinion, he seemed a little embarrassed and he then revoked all that he had said in the police station and which is almost impossible to achieve. We know that it deals with a certain principal...after all the Mayor's signature is at stake! But the meeting did not seem to bother him, and he did mention the fact that the witnesses that were involved were "honest people" and at no time did he try and create a feeling of distrust towards them and at no time did he become worried over their testimonies.

We therefore absolved Mr. [REDACTED] with the conviction that he was the first to deplore his statements, and that they were perhaps a bit premature

nor that he tried to make a fuss over the official version of facts that were jointly inscribed in the case by six of the most respected and most dignified inhabitants of the community, among which one of these was the Municipal Council.

Three days after these events, Mr. [REDACTED], moreover, stated that one of his administrators, Mr. [REDACTED], had made some very different statements and had also remarked that, "In any case, there must be something to all of this..."

The witnesses are very trustworthy people

We pursued our investigation all over the country side and we realized that not one individual doubted the sincerity and the statements that had been made by the witnesses. On a whole, all of the Beacourtians are open and sincere, logical and calm, and objective people. And, they never pretended to know more than they really knew.

The Chief of the police station of Beaucourt-Hamel that had not been alerted or warned of the event on that famous evening yet, when we posed the problem of the matter to him he voluntarily responded, "They have surely seen something!" All of the witnesses are employed by the railroad and they have made us aware of the following observation, "Why tell stories?" These inventions, if they were only that, would make us look bad in the eyes of our bosses. And, also possibly jeopardize our individual job positions.

An orange light in the fields

Now, we will continue on in a more pleasant mood and by this we refer to the fact that the next night some of the young people of the village were shooting firecrackers in the fields of Mr. [REDACTED], and we found among the fields some of these halfburned firecrackers by the fields, but this was not another cause of confusion as the cause was understandable.

More interesting is the observation that was conducted the night of May

May 11 and May 12 by Mr. and Mrs. [REDACTED] that live on the side of the Miramont highway, a little above the other witnesses. They had not spoken to the press and other officials. Their statement is as follows.

"On May 10, we did not see anything as we were asleep, Mr. [REDACTED] states. But the following evening, I was awakened at approximately 3 in the morning (and at our ages, sleep is one of our weakness's) as I passed by the window that passes through the room and is located in a South-West direction. I was attracted by a rather brilliant orange light that I perceived through the window. It was the same in diameter as the moon and the range of the glare reached the Decuperer home that is to the left of the Cafeteria at approximately 80 meters. I woke my wife up and told her to come and observe this strange light. She did and then after a few seconds, the light disappeared and did not reignite so that we went back to bed."

Mrs. [REDACTED] confirmed the testimony of her husband. At this time of the night, it is rather strange that one should believe that it could have been a stray firecracker, and no one else would have observed it. At the Decuperer farm, we found out that no one had seen anything strange and that all told, they had all slept straight through the entire night. This surpassed the time that the Laines had been aroused by the strange light.

#### Conclusions

These are the first indications of an investigation that took place during a period of 10 hours on Saturday and Sunday the 18 and 19 of May. This was only 8 days after the occurrences. Some things must still be cleared up, as we have already indicated and therefore all that we comment on the magnetic investigations that were conducted on the metallic pieces that were located near the observation points. This is given later as a simple indication because a systematic study was begun after the set of phenomena that were reported, referring to those that took place in Vins, Palada and Beaucourt. We will

draw attention to the reader of the note and the magnetic measurements that follow.

The only place that is lacking now is that which would eventually deal with the vibrations that were confirmed both in Vins and Palada. These can be supported as new and important elements for the solution of lift and support elements of the propulsion of Non-Identified Flying Objects. We continue our study of this subject.

~~MIRAMONT~~

Note:

If, by some chance, this article should fall into the hands of that person or persons whose automobile passed on Miramont highway, the tenth of May at approximately 11:00 p.m., and if they possibly did observe the "small men" on the path of the hill, we would be very appreciative if they would place themselves in contact with us even if they should want to remain anonymous.

14 April 1957  
Toulon, France

#### SOUCOUPE LANDS BRIEFLY IN PROVENCE

April 14, 1957: At about 3 p.m., Mme. [REDACTED] and Mme. [REDACTED], the wife of the village constable, were walking on Route #24 about half a mile from the village of Vins, near Toulon in southeastern France. To their great astonishment, and not without some alarm, they saw a metallic construction land 100 yards from them. It took off again almost immediately without any sound. They described it as circular in form, about 6 feet in diameter, and surmounted by antennas resembling radar apparatus.

When she had recovered from the shock, Mme. [REDACTED] told the authorities - in this case her husband - and immediately advised the police at Brignoles, who quickly arrived on the scene. They found - and recorded in their report - "suspicious traces": the ground was disturbed, and weeds were crushed, at the spot where the two ladies had seen the "saucer" land. Moreover, they were able to find a third witness. A beekeeper, [REDACTED], resident municipal counselor, had not only seen the astonishing thing, but also heard it.

He said that he was on a hill, about 300 yards from the landing spot, when "a loud metallic noise made me turn around. Thinking that two cars must have collided on the road, I ran to see if I could be of any assistance. Then I saw a metallic object make an enormous jump and disappear."

The witness<sup>es</sup> agreed absolutely on the size, thickness, and shape of the object: three feet high, with a very pronounced swelling on the upper surface; Mme. [REDACTED] spoke of "a giant top." This "top" had risen vertically, raising a whirlwind of dust, and then had shot off toward the south.

The testimony of the beekeeper conflicted with that of the two women on one point. The women heard no noise. But they stated, however, that the object had landed on the highway before it settled down on the dirt road near them. It therefore seemed reasonable that the sound heard by the beekeeper might have been produced by billboards along the highway, set vibrating by the strong rush of air produced by the craft.

It did not seem possible to question the good faith of the witnesses to this event. They are unanimously respected, and the village people cannot believe that they would conspire to perpetrate a hoax. The Mayor of Vins, M. Ventre, has himself vouched for their respectability.

The "apparition" of Vins has been taken very seriously by a great number of authorities. Technicians from the Research Center at Paris, and from Lyon, came yesterday to investigate, followed by specialists from the Maritime Prefecture of Toulon, from the D. S. T., and from the Security Forces of the 9th Military District. With Geiger counters, magnetometers, and other detectors, they engaged in various operations, whose results they did not divulge.

-- From Nice-Matin (Nice, France), 4/20, as reprinted in Alfred Nahon's Courrier Interplanétaire, 5/15/57. We thank Manon Darlaine of Hollywood, Calif., for sending us this issue of the Courrier.

THREE NON-IDENTIFIED FLYING OBJECTS LAND IN FRANCE.

At Vins-Sur-Caramy (Var), Palalda (Pyr-Or) and Beaucourt-Sur-Ancre (Somme) three unidentified flying objects were observed from the ground, eleven eye witnesses verified the through truth of this statement. The physical phenomenons that were also constant can support the important elements of the investigation that was carried out by C.I.E. and the Bureau of O.V.N.I. (U.F.O).

Last March we announced the continuation of the proposal that was announced in 1957. This took place in a spectacular manner and the apparition of "non-identified flying objects" (see the last issue of Ouranos) we did not think that the events would take place again and again. On April 14 and then again on the 22<sup>nd</sup> of April and the last of these events took place on May 10. We were asked to investigate and confirm these events on the basis of the facts that were thought to be the most significant amongst those that we had amassed up to this time.

The press has been the mirror of these facts of which the first event that occurred at Vins and then at Palalda and the last at Beaucourt supplied the material. We were in direct contact with the eye witnesses, police departments, aeronautical services and the press and reporters. All of the latter were also informed of our interest in all available data.

The narrations that were published by the different newspapers, each was able to be confirmed, presented important differences on the essential points that naturally made the technical investigation indispensable. What was necessary to complete this investigation or how long it would take was immaterial.

The first results of these investigations have been studied by the Committee of Investigation of C.I.E. Ouranos in the course of the last two meetings. Examinations and analysis are now being pursued.

Therefore without confirming anything we publish and present, in their chronological order the first reports that are related to the three events.

Case #1 - Vins-sur-Caramy (Var), April 14, 1957.

Detective: Jimmy Guieu, Chief of the Investigational Bureau of C.I.E. Ouranos.

Assistant: M. Pierre Ayraud, Engineer of studio of Radio Monte-Carlo.

Eye Witnesses: Miss [REDACTED], Miss [REDACTED], Mr. [REDACTED], all three live in Vins-sur-Caramy.

On Sunday, April 14, 1957, at 3:00 P.M., Misses [REDACTED] and [REDACTED] were walking along route D.24 at approximately 1 kilometer to the east of Vins-sur-Caramy. Suddenly, at approximately 100 meters from where they were standing, a curious metallic apparatus landed. The apparatus was dull metal colored and cone shaped and the nose of the apparatus was vertically pointed downwards. The apparatus was similar to a large spinning top with a convex peak. The maximum height of this apparatus is believed to be approximately 1.50 meters and the maximum diameter was approximately 1 meter. There were metallic like tigela that were parallel to the walls of the cone shaped apparatus that were rapidly vibrating.

At the time that the machine was maneuvering to land the witnesses heard a deafening noise. This noise was made by a signal panel that was rotating (#1 on the diagram that follows) that was situated at approximately 5 meters from the landing point and oscillated and vibrated in a brutal manner.

Misses [REDACTED] and [REDACTED], frightened, let out a cry of surprise and terror and the same time of the noise.

Alerted by these shouts and screams, Mr. [REDACTED], who had been caring for an apiary in the hillside, came running as he thought that there had been an automobile accident. It was then that he saw the apparatus take-off and once more engage in the strange vibrations. Then the apparatus made a skip over the route and making a turn towards the east (approximately at 5 or 10 meters of altitude) it once more landed on a slight little path at approximately 200 meters of its first landing point.'

After its turn the apparatus once more began utilization of the dignified signalling device (#2 on the diagram) which was subjected to brutal oscillations and violent vibrations that produced an awful noise ,a "resonance" that was extremely remarkable. During the evolutions of the object all of the witnesses saw the panels vibrate in a violent manner as if it had been subjected to repeated violent shocks at a very rapid rate.

Afterwards the apparatus took off, pitching from side to side and all the time very slightly towards a south-east direction and at a very moderate speed. There was no moment when the apparatus itself did vibrate. The complete observation lasted approximately 1 minute.

Miss [REDACTED] warned her husband, who later accompanied by the policemen from Brignoles went to investigate the area. And at the place of the supposed landing the police do say that they did encounter a spot of land that was marked (on the path of the route that was supposedly followed) and the police did state that this piece of land did seem to have been swept under the effect of powerful blowers. On the path that was of swept land (second landing) the traces were still very clear. The ground was "flushed" on a diameter of approximately 1.50 meters.

On April 17, 1957, in the company of Mr. Pierre Ayraud of Radio Monte-Carlo, I went to the police station in Brignoles (Var). On the presentation of my identification card as a detective of C.I.E. Ouranos the officer on duty obligingly gave me an account of the investigational report that had been conducted. He informed me that the witnesses were not only very respected and faithful but that they had never been caught in the act of any deceit or fraud,

Not being able to accompany me to Vins, the officer gave me a letter of introduction for a Mr. Ventre that is the head officer in Vins. Arriving at approximately 3;00 in the village (at 9 kilometers to the north east of Brignoles) we were not able to get in touch with Mr. Ventre. I then went out in search of the witnesses and began to ask questions of the villagers. All of my questions were in vain as they had no news of anything ! They did not know (or did not want to say ) where the latter could

Mrs. [redacted] informed her husband, a rural policeman, who soon in the company of the police of Brignoles went to the places. At the place of the first landing the police observed that the ground (along the edge of the road) seemed to have been violently "swept" by the effect of a powerful wind. On the packed-down dirt road (2nd landing) the traces were even plainer--the earth was driven away over a diameter of a meter to a meter and a half.

On April 17, 1957, accompanied by Mr. [redacted], sound engineer in the Monte-Carlo Radio Studio, I went to the police of Brignoles (Var). On presentation of my card as investigator for the Ouranos the adjutant obligingly acquainted me with his report of investigation. He affirmed at once that the witnesses are not only of good faith, but they are above any suspicion of a hoax.

As he could not accompany me to Vins, the adjutant provided me with a word of introduction to Mr. Ventre, the mayor of Vins s/Caramy (on the Caramy). Arriving at 15 o'clock at the village (9 kilometers to the northeast of Brignoles) we could not get in contact with the mayor who was absent. So I set about to question the witnesses and interrogated the villagers. My questions caused a freeze-up! Nobody knew anything (or would not talk) about where they were to be found. After some minutes of research through the streets of the village the news of our arrival had caused "those who knew" to flee. The others were content to look on us with suspicion . . . in substance, irritated by the press, the radio and TV after 48 hours the witnesses had "taken to the bush" on the near hill. Mr. [redacted] who was working this day at the bottom of the bauxite mine had no need himself to hide . . .

During our "chase after the witnesses" a front-wheel-drive Citroen stopped in the square of the village. The adjutant from the police of Brignoles, followed by a sergeant, and a policeman got out coming to supervise (?) my investigation. At once the sergeant peremptorily declared that the machine in question, "remote controlled" had certainly come from the "base of the Isle of Levant." I took exception to this affirmation alleging that no nation possesses aircraft that move silently. I explained besides to the sergeant that if the signposts had vibrated with such a racket close to the machine, this came from the fact that they had been caught in the magnetic propulsion field. General skepticism. I offered then to try to demonstrate the matter by an experiment.

Skeptical, but intrigued, my interlocutors acquiesced.

With our 4 CV following their Citroen we arrived at the location of the first landing on the road D.24. There in the presence of the police who observed my experiment attentively I approached my compass to the body of the 4 CV and noted the amplitude of the deviation of the needle, 3 to 40 maximum. Then I placed the compass at the exact spot of the landing--negative result, not a vestige of magnetism in the soil.

However, at 5 meters from there the road-sign panel (No. 1 on the drawing) made the needle of the compass jump, marking thus a deviation of 150 (we recall that the mass of the Renault only made the needle deviate 3 or 4 degrees). I invited the sergeant personally to go through the same experiment. The result was identical to that which I had obtained.

be found. After a few minutes in the village the news of our arrival made those that knew anything "flee" and the others only regarded us with suspicion. In other words already irritated by the press, radio, and television and after 40 hours the witnesses had gone in hiding in a near hill. Mr. [REDACTED] was working that day in a bauxite mine and therefore did not have any reason to also "go into hiding".

During our "search" of the witnesses, a front wheel drive Citroen automobile had stopped in the village square. The warrant officer (or comparable rank)\* of the Brignoles Police Station, followed by another corporal and another policemen stepped down from the automobile and made their way towards me .... to come and supervise my investigation!

At the very first the Corporal preemptively declared that the apparatus in question - the "teleguide" -most likely came from the base on the Isle of Levant. I contested this affirmation explaining to him that no country or nation had an aircraft that could move in absolute silence! I also explained to the Corporal that if the signal poles could vibrate with such an amount of noise near the apparatus, this probably indicated that they had been taken into the general magnetic field of the propellers. General scepticism. I then offered to go and investigate the place that this occurred to see if there were any magnetic traces remaining.

Sceptical but intrigued my interlocutors agreed.

Our "4CV" followed their front wheel drive Citroen and we arrived at the place where the apparatus had landed the first time on Route D 24. There in the presence of the police officers who, on my orders, were attentively watching and observing my experiment, I proximated my compass against the body frame of the "4CV" and was made aware of the amplitude of the deviation of the needle, approximately 3 degrees. And then I placed my compass to the right of the spot where the apparatus was supposed to have landed. The result was negative in relation to any trace of magnetic activity.

But at 5 meters from this point, where the signal poles had been (#1 on the diagram) it made the needle on my compass skip approximately 5 centimeters thus making a deviation of 15 degrees ! Let us remember that the mass of the Renault had only made the

needle skip 3 to 4 given degrees! I invited the corporal to conduct these same experiments and the result was identical to those that I had conducted.

One instant later, we then went up to the route that was followed by the apparatus in flight and to the right (approximately 100 meters) to the other signal pole where the apparatus had also passed. This pole (indicating to the Brignoles) is also magnetized and proved it by showing the skip in the needle of the compass another time to 15 degrees. Thus on the third pole, that was situated in a direction towards the village of Vins-sur-Caramy at approximately 6 to 8 meters, the needle did not move at all on the compass. This test was negative clearing showing that the other two poles were greatly magnetized and this really amazed the policemen. The latter also reenacted the investigations that I had previously conducted on the apparatus poles and reached the very same results and therefore came to the same exact conclusions.

Then we moved to the small path where the aircraft had supposedly landed the second. There was no remaining magnetism on the ground. Thus the <sup>irrigation</sup> vane (0.40 meters to one side) that was opened (in a dry state) revealed a remnant magnetism that made the needle of the compass move approximately 15 degrees, like poles #1 and #2.

The apparatus was then supposedly only 1.50 meters from the irrigation vane at the maximum. These tests were then repeated by the corporal, the warrant officer and the policemen were also very important and especially in the absence of the magnetism on the pole that was precisely the one that had not been submitted to the vibrations that the other poles had. Only a profound and appropriate study and investigation of these results could let one confirm that it was in fact related to a magnetic phenomenon that was natural or consecutive of the ground environment.

We returned to the village, thanks to the presence of the policemen I was able to return and encounter Mr. [REDACTED]. The latter assured of the fact that I was an investigator (he did not want to have to go through another interview for any newspaper!) he was willing to go and fetch his wife and Mrs. [REDACTED] that were in hiding in the near hill! This is why I was finally able to talk with the witnesses! Our interview

Plate 1 - A = First landing.  
          B = Second landing.

Signal poles 1 and 2 and the magnetic deviation. Signal pole 3 -no deviation.

Irrigation vane -Magnetic deviation.

Inset - Scheme of the apparatus with the peripheral tigea (vibrating) according to the description by the two witnesses.

was recorded on a tape recorder by Engineer Mr. Pierre Ayraud and released on the same day on (April 17 at 7:08 P.M.) the Radio Monte-Carlo Chain Stations.

Note:

In contrast to what the press has announced the D.S.T. is not investigating this event. On the morning of April 17 (before my departure) the D.S.T. indicated that only the Air Police would become involved. I therefore got in contact with the Air Police where Inspector Rochu confirmed that in relation to the Draguignan and the fact that they were on the way to the spot the apparatus had been seen. This took place exactly 4 days after the event.

I tend to have to place emphasis on the diligence and the objectiveness of the policemen of Brignoles. The latter sent out, without a delay, detailed reports to the Air Police, the Minister of the Interior, the Commander of the IV Air Command and several other official organizations. A second report that was made up from my own personal investigation and mentioned the personal remarks and tests (magnetic measurements) has been, I believe, sent by the Brignoles police force to the Air Police of Marseille where it should have arrived on April 19.

Jimmy Guieu.

Vins-Sur-Caramy - Top-Some tourists examining the landing spots. Bottom- Jimmy with Mr. Pierre Ayraud to his right questioning Mrs. [REDACTED] and Mrs. [REDACTED]. In the inset -Jimmy Guieu registering the magnetic deviation of one of the guide poles that was near the spot where the "object" landed.

Plate 2 - A = First immobilization.  
B = Second immobilization.

Under A - Around the circle only the metallic poles had any magnetic resistance. Then one month later the third pole to the left of the latter had also acquired the magnetism.

Plate 3 - In the circle are the black sets of marks and the landing spot.

Along the edge of the route the lattice work and the metallic fence posts (wire in T form).

The distance that is indicated is thought to be the maximum.

Plate 4 - To the left - The view that was taken from the window of Mr. [REDACTED]. It apparently was from here that the witnesses saw the light of the projector and the three "small men". The distance from the window to the arrow does not surpass 50 meters. Above the high shrubbery that borders the highway is behind the arrow. The pasture where the cows are let out that belong to Mr. [REDACTED]. Let one eventually remember the place that this occurs so that no confusion is therefore credible.

To the right - Next to our general secretary and the dotted white lines one can observe the sets of marks that were left, near the place of the observation and the surrounding area. These marks were well worn over a period of time and are presently not quite so noticeable as they have been smoothed out but one of them still bears a distinct tire mark of the automobile that passed that night. To the right we see the transmitter. The arrow indicates the place where Mr. [REDACTED]'s farm is located in the background.

To the right - View that was taken from the highway but in the opposite direction. There one sees the house of Mr. Laine. The arrow indicates the area of the field where the "object" was stopped and Mr. [REDACTED] and Mr. [REDACTED] saw from their windows. To the right of the arrow one sees the cafeteria. This all occurred at 3:00 P.M. one night.

ENQUÊTEUR : **JIMMY GUIEU**  
Chef du Service d'Enquête

Nom & Prénoms des témoins oculaires: Madame [REDACTED] - 73 ans  
" [REDACTED] - 65 "  
Monsieur [REDACTED] - 50 ans (?)

Leur adresse & lieu d'observation: VINS s/CARAMY (Var) FRANCE

Date de l'observation: Dimanche 14 Avril 1957 - Heure : 15 heures

Le Dimanche 14 Avril à 15 heures, Mesdames [REDACTED] & [REDACTED] se promenaient sur la route D.24, à 1 km env. à l'Est de Vins s/Caramy. Soudain, à une centaine de mètres de leur position, atterrit, sur la route, un curieux engin métallique (couleur métal mat) en forme de cône, la pointe dirigée vers le bas. L'objet ressemblait un peu à une grosse toupie (sommet convexe): hauteur maxima: 1 m 50, diamètre maxima: 1 m environ. Perpendiculairement aux parois du cône se trouvaient des tiges métalliques animées de vibrations rapides.

A l'instant où l'engin manœuvrait pour se poser, les témoins entendirent un vacarme assourdissant. Ce bruit - "métallique" - était produit par un panneau signalisateur routier (N° 1 du croquis joint) situé à 5 m environ du point d'atterrissage et qui oscillait et vibrait brutalement.

Mesdames [REDACTED] & [REDACTED], effrayées, poussèrent ensemble un cri de stupeur succédant immédiatement au vacarme.

Alerté par ce tumulte et ces cris, M. [REDACTED] Jules qui, à 300 m de là, donnait des soins à un rucher dans la colline, se précipita, croyant à un accident d'automobiles. C'est alors qu'il vit l'engin décoller et perçut de nouveau les étranges vibrations métalliques. Le "cône" fit un bond au-dessus de la route, décrivit un virage (vers l'Est, à 5 ou 10 m de hauteur maximum) et alla se poser une seconde fois dans un petit chemin à 200 m env. de son premier point d'atterrissage.

Lors de son virage, il survola un second panneau signalisateur (N° 2 du croquis) lequel fut à son tour soumis à de brutales oscillations et à des vibrations produisant un bruit, une "résonnance" extrêmement important. Durant les évolutions de l'objet, les trois témoins virent très nettement ces panneaux vibrer, tout comme s'ils avaient été soumis à de violents chocs répétés à une cadence rapide.

Ensuite, l'engin décolla, tanguant bord sur bord, et s'en fut toujours silencieusement vers le S.E à une vitesse modérée. A aucun moment l'engin lui-même ne fit du bruit. L'observation complète avait duré environ une minute.

Madame [REDACTED] avertit son mari, garde-champêtre qui, bientôt en compagnie de la Gendarmerie de Brignoles, se rendit sur les lieux. A l'emplacement du premier point d'atterrissage, la gendarmerie constata que la terre (sur le bord de la route) semblait avoir été violemment "balayée" sous l'effet d'un souffle puissant. Sur le chemin de terre battue (2ème atterrissage) les traces étaient plus nettes encore: terre "chassée" sur un diamètre d'environ 1 m à 1 m 50.

-o-o-o-o-o-o-

Le 17 Avril 1957, en compagnie de M. Pierre Ayraud, ingénieur du son au studio

de Radio Monte-Marlo, je me rendais à la gendarmerie de Brignoles (Var). Sur présentation de ma carte d'enquêteur C.I.E.O., l'adjudant me fit obligeamment prendre connaissance de son rapport d'enquête. Il appert d'emblée que les témoins sont non seulement de bonne foi mais aussi au-dessus de tous soupçons de supercherie.

Ne pouvant m'accompagner à Vins, l'adjudant me remit un mot d'introduction pour M. Ventre, Maire de Vins s/Carax. Arrivés à 15 h au village (à 9 km au N.E de Brignoles) nous ne pûmes prendre contact avec le maire, absent. Je me mis alors en quête des témoins et interrogeais les villageois. Mes questions jetèrent un froid! Nul ne savait (ou ne voulait dire) où ceux-ci se trouvaient! Après quelques minutes de recherches par les rues du village, la nouvelle de notre arrivée avait fait fuir "ceux qui savaient"! Les autres se contentant de nous regarder avec suspicion... En substance, irrités par la presse, la radio et la T.V depuis 48 h, les témoins avaient "pris le maquis" dans la colline proche! M. [redacted] travaillant ce jour là au fond de la mine de bauxite n'avait nul besoin, lui, de se cacher...

Durant notre "chasse aux témoins", une Traction<sup>(1)</sup> stoppa sur la place du village. L'adjudant de gendarmerie de Brignoles, suivi d'un brigadier et d'un gendarme en descendirent, venant superviser(?) mon enquête. D'emblée, le brigadier me déclara péremptoirement que l'engin en question - "téléguidé" - venait certainement de la "base de l'Île du Levant". Je m'inscrivis en faux contre cette affirmation; alléguant qu'aucune nation ne possédait d'aéronefs mus silencieusement. J'expliquais en outre au brigadier que si les poteaux signalisateurs avaient vibré avec un tel vacarme à proximité de l'engin, cela provenait du fait qu'ils avaient été pris dans son champ magnétique propulseur. Scepticisme général. J'offris alors de tenter de démontrer la chose par une expérience.

Sceptiques mais intrigués, mes interlocuteurs acquiescèrent.

Notre 4 CV suivant leur Traction, nous arrivâmes à l'emplacement du premier atterrissage, sur la route D. 24. Là, en présence des gendarmes qui, sur ma demande, surveillèrent attentivement mon expérience, j'approchai ma boussole contre la carrosserie de la 4 CV et fit constater l'amplitude de la déviation de l'aiguille: 3 à 42 maximum. Ensuite, j'allais poser la boussole à l'endroit exact de l'atterrissage: résultat négatif, point de rémanence magnétique au sol.

Par contre, à 5 m de là, le panneau signalisateur (N° 1 du croquis) fit faire un bond à l'aiguille de la boussole, marquant ainsi une déviation de 15 à 18 (rappelons que la masse de la Renault n'avait fait dévier l'aiguille que de 3 à 4). J'invitai le brigadier à procéder personnellement à la même expérience: résultat identique à celui que j'avais obtenu.

Un instant plus tard, nous suivîmes sur la route la "ligne de survol" de l'engin qui, à 100 m de là environ, passait au-dessus d'un autre panneau signalisateur (N° 2 sur le croquis). Ce panneau (indiquant "Brignoles") était également "magnétisé" et faisait dévier de 15 à 18 l'aiguille de la boussole. Par contre, un troisième panneau situé 6 ou 8 m plus loin (indiquant "Vins s/Carax"), lui, n'offrait aucune trace de magnétisation et ne déviait pas l'aiguille de la boussole! Ce test négatif, mettant clairement en évidence la magnétisation des deux autres panneaux, stupéfia les gendarmes. Ceux-ci, une fois encore, procédèrent à des vérifications à l'aide de la boussole: conclusions identiques.

Nous traversâmes la route et nous engageâmes sur le petit chemin de terre battue où l'engin se posa une seconde fois. Aucune rémanence magnétique au sol. Par contre, une vaine (0,40 de côté) d'irrigation en fer (rouillée) ouvrant dans le ruisseau (à sec) révélait une rémanence faisant dévier de 15 à 18 l'aiguille de la boussole. À l'instar des panneaux 1 & 2, cette plaque métallique avait été magnétisée! L'engin s'était d'ailleurs posé à seulement 1 m ou 1 m 50 d'elle maximum. Ces tests successifs contrôlés par le brigadier, l'adjudant et le gendarme sont probants.

(1) Automobile "Citroën" à traction avant.

An instant later we followed the route of the "line of overflight" of the machine, which at about 100 meters from there had passed over another sign-post panel (No. 2 on the drawing). This panel (which indicates Brignoles) was also magnetized and made the needle of the compass deviate 15°. However, a third panel situated 6 or 8 meters beyond (indicating Vins s/Car-amy) did not have a trace of magnetization and did not deviate the needle of the compass. The negative test, which put into evidence the magnetization of the other panels, stupefied the police. They once more proceeded with the checking using the compass--result identical.

We went over the route and found ourselves on the little beat-down dirt road where the machine posed the second time. Not a trace of magnetism in the soil. However, a sluice gate about .4 of a meter to the side, used for irrigation and made of iron (rusted) opening into a brook (dry) showed magnetization making the needle of the compass deviate 15°. After the fashion of the panels 1 and 2 this metallic plate had been magnetized. Besides, the machine had posed at the most 1 to 1½ meters from it. These tests successively checked by the sergeant, the adjudant, and the policeman are conclusive.

Coming back to the village, thanks to the presence of the police, I was able to find the rural policeman, Mr. [REDACTED]. The latter assured as to my activities as an investigator (he did not want at any cost to have to do again with a newspaper man) also agreed to seek out his wife and Mrs. Garcin hiding on the hill. Thus I was able at last to interrogate the eye witnesses. Our conversation was recorded on the tape recorder by the sound engineer Mr. Pierre Ayraud, and transmitted the same evening (April 17) at 19:08 o'clock over the Monte Carlo network.

The mere fact of the considerable residual magnetisation revealed by the metal panels and metal plate makes it unnecessary to insist on the good faith of the witnesses.

-----

N. B. Contrary to what the regional press announced the D. S. T. did not concern itself with this matter. On April 17 in the morning (before my departure) let me know that only the Air Police were concerning themselves with it. I then got in contact with the Air Police, whereupon Inspector Rochu confirmed the matter to me, particularly pointing out that a correspondent from Draguignan was going to the places. This correspondent made an investigation on April 18, i. e., four days after the event.

I want to point out particularly the diligence and the objectivity with which the police of Brignoles acted: they sent a detailed report immediately to the Air Police, to the Ministry of the Interior, to the Commandant of the 4th Air Region, and to other official organisms. A second report covering the circumstances of my personal investigation and mentioning the points verified, I believe, was sent by the police of Brignoles to the Air Police in Marseilles, where it should have arrived on April 19th in the morning.

Done at Marseilles April 20, 1957

(Seals and signatures)

Revenu au village, grâce à la présence des gendarmes je pus rencontrer le garde-champêtre, M. [REDACTED]. Celui-ci, rassuré sur mes activités d'enquêteur (il ne voulait à aucun prix avoir - de nouveau - affaire à un journaliste!) accepta d'aller chercher sa femme et Mme [REDACTED] cachées dans la colline! C'est ainsi que je pus - enfin! - interroger ces témoins oculaires. Notre entretien fut enregistré sur magnétophone par l'ingénieur du son M. Pierre Ayraud et diffusé le soir même (17 Avril) à 19 h 08 sur la chaîne de Radio Monte-Carlo.

La seule présence des nombreuses rémanences magnétiques relevées sur les panneaux et la vanne de métal rend inutile d'insister sur la bonne foi des témoins.

-o-o-o-o-o-

N.B. Contrairement à ce que la presse régionale annonça, la D.S.T ne s'est pas occupé de cette affaire. Le 17 Avril au matin (avant mon départ) la D.S.T m'indiqua que seule la Police de l'Air s'en occupait. Je pris alors contact avec la Police de l'Air où l'Inspecteur Rochu me confirma la chose, précisant qu'un correspondant de ~~l'Express~~ Draguignan se rendrait sur les lieux. Ce correspondant effectua l'enquête le 18 Avril, soit 4 jours après l'évènement.

Je tiens à signaler la diligence et l'objectivité avec lesquelles opérèrent les gendarmes de Brignoles qui adressèrent sans retard un rapport détaillé à la Police de l'Air, au Ministère de l'Intérieur, au Cdt de la 4ème Région Aérienne, et à d'autres organismes officiels. Un second rapport, faisant état de mon enquête personnelle et mentionnant les constatations effectuées (rémanences magnétiques) a été je crois envoyé par la gendarmerie de Brignoles à la Police de l'Air de Marseille où il a dû arriver le 19 Avril au matin.

Fait à Marseille le  
20 Avril 1957.

## APRIL-MAY 1957 - THREE LANDING OR NEAR-LANDING CASES IN FRANCE

In News Letter #9 (p. 25) we mentioned the excellent accounts of three 1957 sightings in France, personally investigated by Jimmy Guieu and Marc Thirouin, whose reports were published in Ouranos #21. The first case was the landing at Vins, in Provence (department of Var), on April 14 (NL #8, p. 13). The second was the extraordinary object seen at Palalda in southwestern France (department of Pyrénées-Orientales) on April 22, not previously described in this News Letter. The third was the "little-men" report of May 10, at Beaucourt-sur-l'Ancre (department of Seine-et-Oise), north of Paris. (See NL #8, pp. 15-16.)

The stories are noteworthy not only for the events but for the quality of the investigations presented in Ouranos, from which we quote below. Readers who are at home in French are urged to read the original accounts, for the magazine presents sketch maps and photographs, together with a number of other interesting details omitted here for lack of space.

Vins-sur-Caramy - April 14, 1957

Our report in NL #8 was taken from the Nice-Matin of April 20, as reprinted in the Courrier Interplanétaire of May 15, 1957. From the Ouranos account it is clear that the newspaper story was incorrect regarding several aspects of the affair.

The object seen landing on Route D-24 (corresponding to a state highway in the U.S.) was described inexactly by the paper as "a metallic construction, circular in form, 3 ft. high, about 6 ft. in diameter, with a swelling on the upper surface; the witnesses spoke of a 'giant top'; surmounted by antennas resembling radar apparatus." As the sketch shows, the object was conical, with a convex top, and rested on its point. It was about 5 ft. high. From the surface of the cone there projected at right angles many little rods, apparently metallic, which were in rapid vibration.

The object itself made no sound at any time; but as it settled down on the highway, a deafening noise came from a metal road sign about 12" x 30", mounted on a post about 5 yards from the landing spot. This sign shook and vibrated violently, further terrifying the two women who were about 100 yards away - Mme. Rami, wife of the village constable, and her friend Mme. Garcin. (Contrary to the newspaper account, both of the women heard the noise.)

The racket was also heard by M. Jules Boglio, tending his beehives on a hill about 300 yards to the north. Thinking that two cars had collided, he ran toward the highway, and as he ran he saw the object take off. Again there was the loud metallic vibration from the sign. The "cone" swerved eastward, traveling only 15 or 20 feet above the ground, and dropped down again on a dirt road about 200 yards from the place where it had landed the first time. During this brief "hop" it passed above another road sign, which vibrated as noisily as the first. (Note: the Nice-Matin story indicated that the women were on the dirt road when the object appeared first. This is incorrect; they were on the highway.)

The thing then took off again, "pitching from side to side," and flew toward the southeast at moderate speed. The entire affair had lasted about one minute.

Mme. Rami immediately notified her husband, and the constable went to get the police from nearby Brignoles. The two landing spots were examined: on the highway, the ground beside the road seemed to have been violently "swept," as if by a powerful blast of air. On the dirt road the traces were even more conspicuous; the earth was "scoured away" in a circular spot about four feet in diameter.

Three days later Jimmy Guieu, with M. Pierre Ayraud of Radio Monte-Carlo, visited the Brignoles police station as the first step in their investigation. They were shown the official police report on the case - which made it clear that the witnesses were above all suspicion of having perpetrated a hoax. Proceeding to Vins, Guieu

was at first unable to get in touch with the witnesses (by that time they were publicity-shy). Under the skeptical gaze of police, and of a brigadier who insisted that the object was a guided missile, Guieu tested the possibility that the vibration of the signs had been caused by the influence of a magnetic propulsion field. The results were striking.

Guieu first tested his compass at the steel body of his car, which deflected the needle only slightly. He then placed it on the ground exactly where the object had first landed - with no effect on the needle whatever. But as he approached the metal road sign that had vibrated so noisily, the compass showed a deflection of some  $15^{\circ}$ . The same deflection occurred at the sign above which the object had flown. But a third sign of the same kind, 25 yards from the first landing-spot, did not affect the compass. The second landing-place, in the dirt lane, was also negative; but a 16" iron irrigation culvert, a few feet from the second landing-place, likewise gave a  $15^{\circ}$  compass deflection.

Back in the village, Guieu found that once the witnesses were convinced that he was not another journalist but a serious researcher they were willing to talk to him. The tape-recorded interview was broadcast that same evening over Radio Monte-Carlo. Guieu states that the case was investigated by the Air Police (equivalent to the ATIC in the United States), but not, as asserted in the Nice paper, by the D.S.T. (equivalent to our FBI).

## 'LITTLE MEN' AGAIN IN FRANCE

May 10, 1957: At Beaucourt-sur-l'Ancre, France (a small village near Amiens), six people reported a UFO landing and several occupants. According to Reuters, INS, and Paris France-Soir, [redacted], a 29-year-old Hungarian refugee, was bicycling home shortly after 10:45 p.m. when he was suddenly "dazzled by a strange projectile." Approaching him in the road "in a threatening manner" were four "men" between four and five feet tall. They carried a brilliant light, which prevented Fekete from making out any details. He fled on his bicycle to the nearby home of [redacted], a railroad signalman. [redacted], his wife, and a neighboring couple named [redacted] who were with them - together with [redacted] and an unidentified companion - "plainly saw" from the [redacted] doorstep "a hundred meters away on the road (about 100 yards), three or four little men dressed in grey running about (s'agitaient), illuminated by the light of an object which was emitting red and white rays alternately." [redacted] told the France-Soir reporter that "I very distinctly saw a luminous ball giving off red and yellow (sic) rays. The object was moving very slowly. A short time later, I made out the silhouettes of three little men who remained nearly twenty minutes, coming and going in the field and on the road." Apparently, the fourth "little man" reported by Fekete was indistinguishable, as a brilliant light was described which the witnesses said was "flashing a blinding light over the countryside." At about 11:15, the hovering object departed at a 45° angle toward the north-northeast at high speed. According to the press accounts, large black "plaques" of an "elastic nature" were found in the road.

104 The press dismissed the story lightly, reporting that the witnesses had really seen the daughter (according to INS, the wife) of a neighboring farmer (the mayor, again according to INS) named [redacted]. She had gone out into the field to see to the cows, carrying a lantern with a pane of red glass in it; this was mistaken as the "saucer"; the cows were the "little men." (1957. [redacted] herself had seen nothing unusual.)

Aimé Michel investigated this case within 48 hours and has provided us with some additional data. He felt that the witnesses were indisputably sincere. This opinion was shared by the people of the village, but according to the cow-and-lantern theorists, they were mistaken about what they saw. Michael added that [redacted] and his unnamed companion "were still trembling with emotion when they talked to me." Because of the bright light carried by one of the four beings, [redacted] was unable to describe them in detail. What he saw was the maximum description: four silhouettes, 4 to 5 feet tall, rather broad bodies, color grey or beige, the head black and broad. They walked with a "tottering" gait. The others described seeing, no nearer than 60 yards, three little men and one light, moving on the road and in the field, between 10:50 and 11:15 p.m. Michel also ascertained that "the farm girl in question remained in the field above the road from 10:10 to 10:50 or 10:55 p.m." One of the witnesses said to [redacted] that "if it was the farm girl who was running so fast with the lantern, she ought to enter the Olympic games."

Regarding the black "plaques" found in the road, [redacted] writes: "At first sight one thinks on an intense heating of the road in a circle of about 3 yards and of an internal melting of the tar, which seems to have flowed. But this is uncertain. The road is lightly traveled. These plaques may have been left by the road-making machines which often pass by. Nobody in the village is able to recall whether or not these plaques were there before the incident."

Michel has no personal opinion about the case. He found it impossible to decide; but "there is a presumption in favor of the witnesses."

-- Besides Michel's letters, sources include the N. Y. Sunday News, 5/12 (Reuters); N. Y. Journal American, 5/12 (INS); N. Y. Sunday Mirror, 5/12 (INS); London News of the World (Reuters), 5/12; and France Soir (Paris), 5/14.

Beaucourt-sur-l'Ancre, - May 10, 1957

Thanks to Michel's personal inquiries, our account of this case was not based entirely on newspaper stories, and requires little correction. Several additional points from the Ouranos article are of special interest, however. For example, the photographs accompanying the article show plainly how close the road is to the window of the kitchen, from which five, and later six people watched, for half an hour, the red-and-white-lighted "object" and the three silhouettes of the "little men," "standing upright and motionless on the road, their arms hanging at their sides, concealed below thigh-level by the roadbank." (During part of the time the figures moved about, with a "tottering" gait, the witnesses told Michel.)

A second interesting fact is that there was another, anonymous, observer of the scene. While those in the kitchen watched the road, an automobile went past. By its headlights, however, the witnesses continued to get a glimpse of the little men, still motionless by the roadside; the driver of this car must certainly have seen the creatures standing there.

Ouranos also discloses that the official "explanation" of the incident, attributed to M. On..., the mayor of the town - namely, that the "light" was a lantern carried by Mme. On..., and that the "little men" were the cows she had gone into the field across the road to look after - was tested. But the attempt to reproduce what the witnesses saw, by using a lantern in the field, demonstrated that no such confusion was possible. Furthermore, the mayor himself, when interviewed by Marc Thirouin, exhibited embarrassment, emphasized his agreement with other neighbors that the witnesses were "sincere, calm, and logical people," and gave the impression that he felt his original signed statements had been somewhat premature.

Finally, Thirouin obtained an interesting report about the next night (May 11-12) from an elderly couple, the On..., whose house is only about 20 yards from the landing-place on the road. On the night of May 10 the On... had been asleep and saw nothing. But about 3 a.m. on the night of May 12 On... saw, from the window of the bedroom, "a big orange light, the size of the full moon, shining in a field about 80 yards away. My wife came to the window and saw it too; a few minutes later the light went out, and since we did not see it come on again we went back to bed."

The curious tarry, elastic "plaques" found on the road, around the circumference of a roughly circular area about 5 yards in diameter, were identified as "asphalt used in road-mending," but no one could suggest how they came to be there. Compass

tests made by Thirouin were less conclusive than those made by Guieu at Vins, since at Beaucourt all the iron stakes along the roadway attracted the needle strongly.
